

Belts with special machining

Designed for Performance, Engineered for Excellence

Machining processes on polyurethane belts

Elatech helps the designer in choosing the most suitable product even when the belt needs complex precision machining.

In fact, due to the latest generation of specific equipment and most modern technologies such as water jet, Elatech may propose specific added value solution for any application.

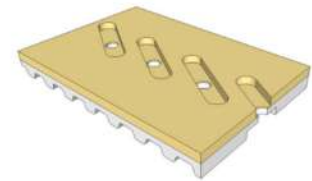

Some machining examples:

Precision longitudinal milling of the back

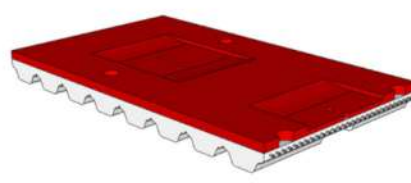

Inclined milling of the back

Counterbores and pockets for vacuum applications

Perforations of any complex size and shape with water jet technology

Longitudinal milling with tooth removal and complex machining
