General information

European ATEX Directives

The ATEX Directives harmonize safety rules in line with the free trading principles of the European Community.

Responsibilities are split between the manufacturers and end users. Manufacturers have to comply with the "Essential Health and Safety Requirements" of the Products Directive 2014/34/EU and end users must prepare an Explosion Protection Document based on risk assessments of their "work places" and "work equipment" to fulfil the "minimum requirements" listed in the Worker Protection Directive 1999/92/EC.

ABB low voltage motors for explosive atmospheres comply fully with the ATEX Product Directive.

According to the regulations, low voltage motors for explosive atmospheres are exempted from the Low Voltage Directive, the EMC Directive and the Machinery Directive.

IECEx System

The IECEx System is a certification system which verifies compliance with IEC (International Electrotechnical Commission) standards relating to safety in explosive atmospheres. It covers equipment, service facilities and personnel competencies and conformity mark licensing system.

Created in September 1999, the System aims "to facilitate international trade in equipment and services for use in explosive atmospheres, while maintaining the required level of safety..." (source: IECEx website, www.iecex.com). It is a voluntary system which provides an internationally accepted means of proving that products and services are in compliance with IEC standards. The voluntary and international aspects of the IECEx System differentiate it from certification under ATEX, for example, which is mandatory but applies only within the European Economic Area.

The IECEx System comprises global certification programs for both equipment and service facilities.

IECEx certification involves – in addition to product tests - assessment of quality control procedures and testing plans, audits of manufacturing plants, and routine on-going surveillance and inspections.

In addition, IECEx has established a comprehensive set of operational documents and procedures to develop a single internationally standardized approach to Ex testing and certification.

The approach includes:

- A standardized "IECEx way of Ex Testing and Certification". There is a single set of operational procedures, and Ex test procedures are always applied in the same way.
- A dedicated Technical and Operational Secretariat to maintain operations. Ex test procedures are evaluated and monitored on a centralized basis.

Who is responsible for the certification work?

A manufacturer needing to have equipment certified under the IECEx System can apply to an IECEx Competent Body (ExCB) in any member country. At present there are more than 30 IECEx member countries. The ExCB performs or coordinates the activities of certification.

A quality assessment of the manufacturer is undertaken by the ExCB itself, and the auditor issues an IECEx Quality Assessment Report (QAR).

Type testing of product samples is performed on behalf of the ExCB by an IECEx Assessment and Testing Laboratory (ExTL). On completion of its work the ExTL's assessment engineer prepares an IECEx Test Report (ExTR).

The ExTR is then submitted to the ExCB for endorsement. Based on the QAR and ExTR, the ExCB then issues the Certificate of Conformity (CoC). The CoC provides internationally accepted

verification that the equipment in question is in compliance with the relevant IEC standards. Once formally issued by the ExCB, both the ExTR and QAR are registered on the IECEEx Internet site. This provides verification that an ExTR and QAR exist for the product and manufacturer.

How do I know if a motor is IECEEx certified?

IECEEx certified motors show the certification number on their rating plate, for example: "IECEEx LCI 05.0008". In this case "LCI" indicates that the IECEEx certificate was issued by LCIE, an IECEEx approved Certification Body in France.

In addition, IECEEx certificates are issued in electronic form and are publicly available on the IECEEx website. They can therefore be viewed and printed by anyone with access to the Internet. See "Certificates & Licences" at www.iecex.com.

IECEEx certification is particularly useful in certain markets. In Australia, New Zealand, and Singapore, for example, IECEEx certificates are accepted, but not all IEC certificates are accepted. Certain other countries, including Russia, China and Korea, are prepared to accept ExTRs as a basis for their own national certificates. There are also many countries that are willing to accept products covered by current IECEEx certificates, even though the countries in question are not members of the IECEEx Management Framework.

IECEEx Conformity Mark License

The IECEEx Conformity Mark System was introduced in 2008. IECEEx Conformity Mark Licenses are issued by approved Certification Bodies in IECEEx participating countries.

The IECEEx Conformity Mark shows that a product has been granted an IECEEx Certificate of Conformity. IECEEx Certification confirms that the product has the appropriate protection for use in explosive atmospheres and that it has been manufactured under systems subject to ongoing surveillance by Certification Bodies. It is recognized in all the countries participating in the IECEEx System, and it also means that the product can be supplied to the market without the need for additional tests.

ABB has been granted IECEEx Certification for a wide range of low and high voltage motors, and these can therefore display the IECEEx Conformity Mark. The hazardous area protection types provided by these motors include

- Flameproof Ex d, Ex de
- Non-sparking Ex nA
- Increased safety Ex ec
- Dust protection Ex t

The IECEEx Conformity Mark License will considerably enhance ABB's ability to market its products

globally. It complements ABB's existing ATEX and other approvals.

Benefits of IECEEx System for end users

A significant advantage of IECEEx is that vendor certificates are available for inspection on the IECEEx website. End users can therefore confirm the validity of IECEEx certificates at any time - which is not possible with ATEX, for example. This increases end user confidence that the motor vendor will be committed to maintaining the necessary quality systems.

Under the quality based IECEEx certification approach the interpretation of the standard is shared throughout the 30 participating countries and individual interpretations by Notified Bodies are not allowed. Another advantage of IECEEx is that the Certificate of Conformity also covers EPL (equipment protection level) "c", see table on next page.

Which ABB motors and generators are IECEEx certified?

All motors listed in this catalogue are IECEEx certified, except motor types M3HP and M3AA in frame sizes 71 to 80.

Compliance on basis of recently updated standards

In complying with the ATEX 95 directives, ABB follows the requirements of recently updated IEC and EN standards. Otherwise ABB follows the requirements of the IEC standards shown in the relevant certificates.

Main standards for explosive atmospheres:

IEC/EN 60079-0	Equipment - General requirements
IEC/EN 60079-1	Equipment protection by flameproof enclosures "d"
IEC/EN 60079-7	Equipment protection by increased safety "e"
EC/EN 60079-15*	Equipment protection by type of protection "n"
IEC/EN 60079-31	Equipment dust ignition protection by enclosure "t"
IEC/EN 60079-14	Electrical installations design, selection and erection
IEC/EN 60079-17	Electrical installations inspections and maintenance
IEC/EN 60079-19	Equipment repair, overhaul and reclamataion
IEC 60050-426	Equipment for explosive atmospheres
IEC/EN 60079-10	Classification of hazardous areas (gas areas)
IEC 60079-10-1	Classification of areas - Explosive gas atmospheres
IEC 60079-10-2	Classification of areas - Combustible dust atmospheres

* Moved to IEC/EN 60079-7 in 2015 revision.

Equipment protection levels (EPLs)

The latest revisions of the IEC and EN standards introduce the concept of "equipment protection levels", which identify products according

to the ignition risk they might cause. A motor's EPL therefore indicates its inherent ignition risk, regardless of its protection type. This makes the selection of equipment for different zones easier. EPLs also enable a true risk assessment approach, where the potential consequences of a possible explosion are taken into consideration. Please refer to the table on the next page for more information about EPLs and EPL markings.

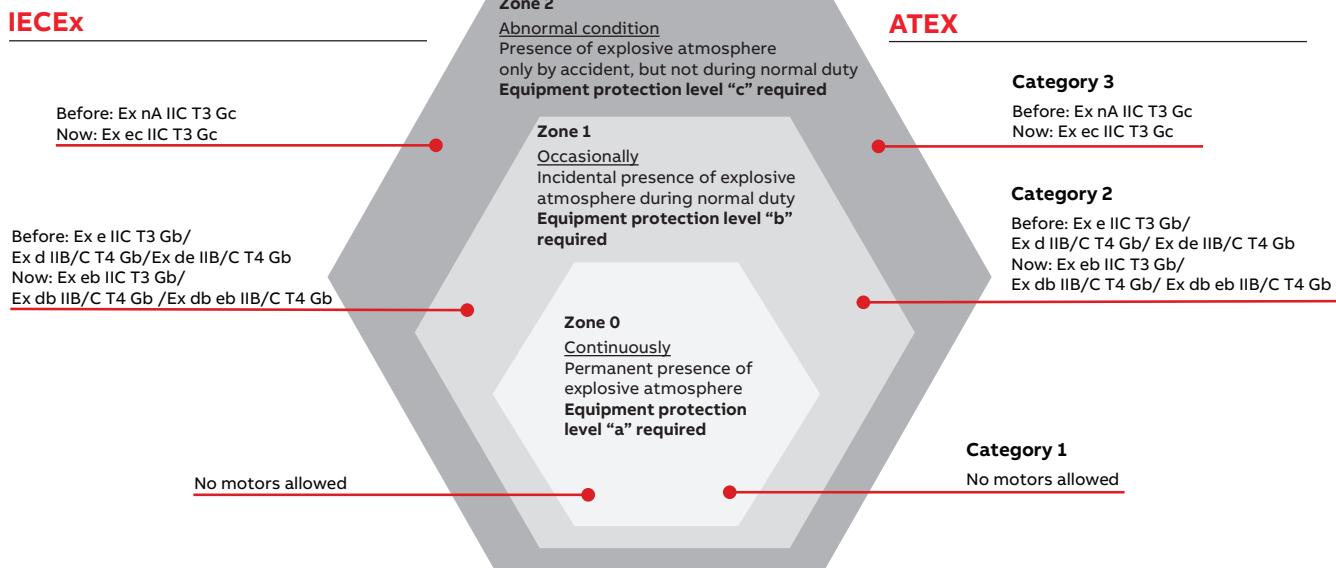

New markings introduced

The latest revisions of the standards IEC/EN 60079-7 and IEC/EN 60079-1 have introduced some new markings for equipment suitable for locations where there is a potential risk of gas present. The non-sparking protection method is no longer used on rotating electrical machines, instead have two levels on increased safety protection been introduced in edition 5 of IEC/EN 60079-7. One higher level of protection with EPL Gb that technically corresponds to the old Ex e, an a new lower level with EPL Gc that corresponds to Ex nA as previously defined in IEC/EN 60079-15.

Further have also several levels of protection been introduced in edition 7 of IEC/EN 60079-1 for flame proof protection. These two changes does affect the markings used both flameproof, increased safety and non-sparking equipment for group II as shown in table below. Product certificates are updated gradually to show new markings, during the transition period may both old and new markings be used in parallel depending type and size of motor.

Old way of marking	Old protection method	New way of marking	New protection method	Zone	ATEX category
Ex e IIC T3 Gb	Increased safety	Ex eb IIC T3 Gb	Unchanged	1 (or 2)	2G
Ex nA IIC T3 Gc	Non-sparking	Ex ec IIC T3 Gc	Increased safety	2	3G
Ex d IIB/C T4 Gb	Flameproof	Ex db IIB/C T4 Gb	Unchanged	1 (or 2)	2G
Ex de IIB/C T4 Gb	Flameproof and increased safety	Ex db eb IIB/C T4 Gb	Unchanged	1 (or 2)	2G

Zones - IECEx and ATEX

Note: Based on traditional relationship between EPL's and zones.

There are systems in place worldwide to classify explosive atmospheres by zones, according to the risk posed by explosive gas ("G") or dust ("D").

Classification of explosive atmospheres according to CENELEC and IEC

The following standards define areas according to the presence of gas or dust in the atmosphere:

- IEC/EN 60079-10-1 Gas
- IEC/EN 60079-10-2 Dust

Standard IEC 60079-0 EN 60079-0 Group	EPL	Protection level	Installation Zone acc. to IEC 60079-10-x EN 60079-10-x Zones	ATEX Directive 2014/34/EU Equipment group	Equipment category	Main motor protection types
I (Mines)	Ma	very high	NA	I (Mines)	M1	NA
II (Gas)	Mb	high		II (Surface)	M2	
	Ga	very high	0		1G	NA
III Dust	Gb	high	1		2G	Ex d/Ex de Ex p, Ex db, Ex db eb, Ex p, Ex eb (Ex e)
	Gc	enhanced	2		3G	Ex ec (Ex nA)
	Da	very high	20		1D	NA
	Db	high	21		2D	Ex tb IP 65
	Dc	enhanced	22		3D	Ex tc IP 65/IP 55

Marking of temperatures, gas groups and explosive atmospheres

To ensure equipment can be safely used in potentially explosive atmospheres, the explosive atmospheres where the equipment is installed must be known. The temperature class of equipment must be compared with the spontaneous

ignition the equipment of the gas mixtures concerned, and in specific cases the gas group must be known (e.g. flameproof protection).

Classification

Gas classification

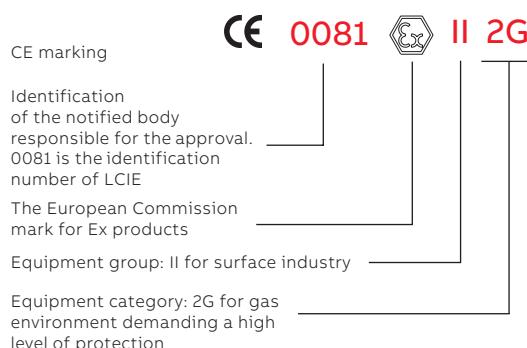

Tempera- ture class °C	Ignition temp. of gas/ vapor	Max. permutiet temp. of equip- ment °C	Gas examples
T1	> 450	450	Hydrogen
T2	> 300 < 450	300	Ethanol
T3	> 200 < 300	200	Hydrogen sulfide
T4	> 135 < 200	135	Diethyl ether
T5	> 100 < 135	100	-
T6	> 85 < 100	85	Carbon disulfide

Gas subdivision

IIA	~120 gases and vapors, e.g. butane / petroleum / propane
IIB	~30 gases and vapors, e.g. ethylene / dimethyl ether
IIC	limited number of gases and vapors, e.g. hydrogen H ₂ / acetylene C ₂ H ₂ carbon disulfide CS ₂

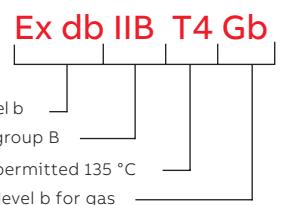

Marking of equipment protection for gas according to ATEX

for gas environments**

Explosive atmospheres

In explosive atmospheres, it is of the utmost importance to ensure the safe use of electrical apparatus. To this end, many countries have regulations concerning both the design and use of such apparatus. These regulations are becoming increasingly harmonized within the framework of IEC recommendations and European Standards. The hazard may be due to an explosive atmosphere composed of a mixture of gas, vapors or dusts with air. This section is concerned only with safety in explosive gas atmospheres for which European Standards and IEC recommendations exist.

Flameproof enclosure Ex db and Ex db eb

The motor enclosure is designed in such a way that no internal explosion can be transmitted to the explosive atmosphere surrounding the motor. The enclosure must withstand, without damage, any pressure levels caused by an internal explosion. The shape, length and gap of joints of part assemblies, at shaft openings, cable entries, etc., shall be designed to allow for throttling and cooling of hot gases escaping outside. The standards emphasize the impact of an explosive atmosphere (for instance, explosion pressure) over constructional requirements of such apparatus.

Work on accessories of enclosure components is only permitted using prescribed tools. Cable entries must meet the requirements of this type of protection.

The temperature of the motor's external enclosure shall not exceed the self-ignition temperature of the explosive atmosphere of the installation area during operation. For this reason, rated output depends on this rated maximum temperature for the area in question. The standard temperature class on flameproof motors from ABB is T4 (135 °C), other temperature classes as T5 (100 °C) and T6 (85 °C) are available on request.

No motor device outside the flameproof enclosure (e.g., ventilator) shall be a potential source of sparks, arcs or dangerous overheating.

Variants combining two types of protection usually combine "d" and "e" protection. The motor is designed with an Ex d flameproof enclosure, while the terminal box features Ex e increased safety protection. Such design combines the superior safety degree of the "d" type of protection with the more simple and worker friendly "e" type protection terminal box.

Alleinschutz – thermistors as sole protection (optional)

Flameproof motors from ABB have been designed to use thermistors as the sole method of protection against overload. This construction, "Alleinschutz", is available as an option, please refer to variant code section for availability information.

"Alleinschutz" refers to the protection of a flameproof motor by a protective device which is triggered by thermistors. The thermistors and relays will switch off the motor in case of overheating before the temperature of the motor's external enclosure exceeds the temperature marking stamped on the rating plate.

Each motor ordered with thermistors as sole protection will be tested, with locked rotor, up to the point where the thermistors trigger the relay to turn off the motor. At the triggering temperature, the motor has to be within the certified temperature class limit.

Only approved relays can be used for "Alleinschutz".

Please note that sizes 315 to 450 require special technical solutions, consult ABB.

Increased safety design, Ex eb

The design of this motor type prevents the occurrence in operation (including starting and locked rotor situations), in all inner and outer parts of the machine, of sparks, arcs or hot spots that could reach the self-ignition temperature of the surrounding, potentially explosive atmosphere.

01
 O = Temperature 0 °C,
 A = Max. ambient temperature (reference 40 °C),
 B = Temperature at rated load and under worst voltage conditions,
 C = Max temperature as permitted by the insul. class,
 D = Max limit temperature as set by the nature of the potentially explosive atmosfer,
 E = Temperature-rise curve of motor at rated output and underworst voltage conditions,
 F = Temp. rise curve under stalled rotor conditons,
 tE = Stalled rotor time.

02 Min. value of time t_E as a function of I_A/I_N acc. to IEC/EN60019-7.

03 Min. value of time t_E as a function of I_A/I_N acc. to VIK.

Note: tE time for VIK differs from EN.

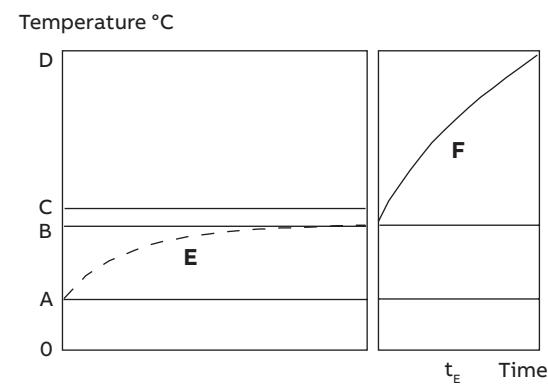

This is ensured by applying constructional or dimensional provisions that mainly concern:

- specified minimum values for creepage distances and clearances
- use of tracking-proof isolating materials
- suppression of sharp angles where static electrical loads could build-up
- ensuring electrical and mechanical assemblies are tightly secured
- minimum backlash values between stationary and rotating parts (e.g. air gap, ventilator, etc.)
- temperature-rise limits, taking into account locked rotor, normal operation, accidental mechanical stalling of machine under the most adverse thermal conditions, i.e. when thermal equilibrium of machine is reached while in service.

Temperature rise limits should be considered for two operating aspects; normal operating conditions and accidental stalling conditions.

Temperature rise limits under normal operating conditions

The expected electrical lifespan of a motor depends on its temperature rise for a given insulation class, and on the motor winding temperature, during operation, which is not homogeneous due to the appearance of hot spots. For these reasons, a safety margin of 10 K is allowed between the winding's temperature rise at rated output, as measured by the change of resistance method, and the maximum temperature rise permitted by the winding insulation class.

—
01

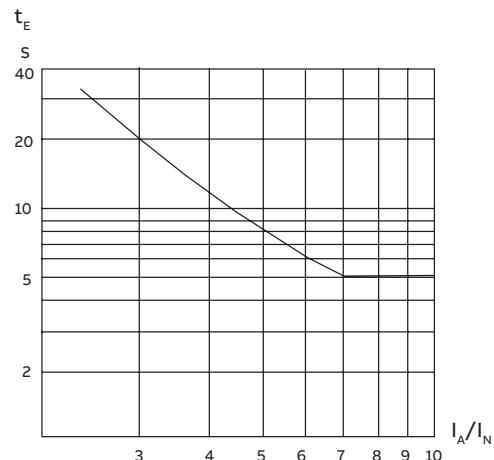

Temperature rise limits during short circuit under accidental stalling conditions

Should the machine stall while in operation, a short circuit current nearly equal to the starting current will develop, and stator and rotor winding temperatures will rise rapidly (see Figure 01).

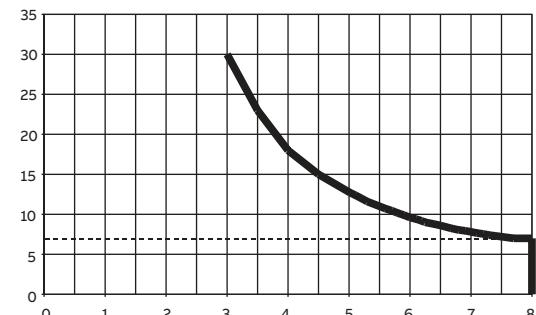

To prevent this temperature value from exceeding the maximum limit temperature as set by the nature of the potentially explosive atmosphere (D in Figure 01), protection devices must trip within a specified time (t_E). This tripping time depends on

the short-circuit current level or the short circuit current to rated current ratio (I_A/I_N). Figures 02 and 03 show, for commonly used protection devices, the limiting ratio between short-circuit current inrush I_A/I_N and rotor stalling time t_E , according to the EN and IEC standards and "VIK" specification. VIK is an industry specification originating in Germany.

This type of protection is inappropriate for commutator machines or brake-motors which, by principle, are capable of producing arcs, sparks or hot spots.

—
02

—
03

Increased safety design, Ex ec

The use of this type of protection is allowed in hazardous areas corresponding to zone 2. The design is known as "non-sparking" or nowadays increased safety ec, because the motor must be designed in such a way that no sparks can occur in any conditions, when used within the ratings specified by the manufacturer, and that no excessive temperatures occur under normal operating conditions, which excludes thermal requirements due to starting or accidental stalling.

Risk assessment and gas tests

Increased safety Ex eb and Ex ec motors have to meet tough requirements with regard to sparking. The latest IEC and EN standards specify criteria for

risk assessment and gas environment tests for rotor and stator designs to show that the motors are spark-free in all operational conditions.

By testing and securing certification for its motors, ABB is helping to streamline the risk assessment process for its customers.

The alternative to testing and certification involves, in the majority of cases, equipping the motor with provision for pre-start ventilation. This means investing in a higher capacity air compressor, piping, and a ventilation control unit. It also requires an additional operation – pre-start ventilation – every time the motor is started.

Benefits of the ABB approach therefore include reduced initial capital expenditure, lower operating costs, and faster starting. Reliability is improved as no additional components are required. Most importantly, ABB's certified motors offer proven safety.

ABB's approach to meeting the requirements

Following a program of gas environment tests in which all rotor and stator tests were passed, ABB has secured certification for its low voltage cast iron motors for explosive atmospheres with aluminum die cast rotor.

Ex ec motors are certified according to the ATEX directive with a voluntary type examination certificate from an ATEX notified body, and according to the IECEx system with an IECEx certificate of conformity.

Aluminum frame motors type M3AA in sizes 71 and 80 with manufacturer ATEX EU Declaration of conformity only.

Dual certificates for gas or dust

Due to the high IP protection class and low surface temperature of the products, the certificates allow also in many cases dual certification for either gas or dust environments. This gives further flexibility as the same motor can either be used in a location with potentially explosive atmospheres with gas, or another with dust. For use in hybrid atmospheres (gas and dust present simultaneously) should limitations in IEC/EN 60079-14 be respected.

The following combinations are possible:

- Ex db IIB/C T4 Gb / Ex tb IIIB/C T125°C Db
- Ex db eb IIB/C T4 Gb / Ex tb IIIB/C T125°C Db
- Ex eb IIC T3 Gb / Ex tb IIIB/C T125°C Db
- Ex ec IIC T3 Gc / Ex tc IIIB/C T125°C Dc

Please refer to the variant code section of flame-proof, increased safety eb and ec motors for

further information about availability of dual certification.

Testing and certificates

Motors for explosive atmospheres have to be officially approved by a recognized test organization, authorized to issue test certificates, to ensure compliance with standards for this type of equipment.

ABB low voltage motors for explosive atmospheres are classified according to the categories, protection types and equipment protection type which are specified in the relevant standards.

Depending on the nature of the potentially explosive atmosphere, it is the responsibility of the user to determine which group and which maximum surface temperature should be specified for the motor installation.

The motors are rated and certified for ambient temperature between -20 °C and +40 °C according to standards. For ambient temperatures below -20 °C and above +40 °C certificates are available for most of the motors.

ABB's motors conform to the stringent standards set by CENELEC (European Committee for Electrotechnical Standardization) and IEC (International Electrotechnical Commission), and are approved by testing laboratories (ExNB/Notified Body) and certification bodies (ExCB).

The motors can be certified according to the ATEX Directive by any of the Notified Bodies "ExNB" of EU member countries. These motors are therefore acceptable in all EU countries and many other countries. In addition, IECEx certificates are available for the most motor types. These certificates can be issued by any registered IECEx certification body (ExCB) worldwide.

Certification other than ATEX or IECEx

The certification provided as standard (ATEX and usually IECEx), is accepted in countries where these are mandatory or accepted as a substitute for other local certification, in addition are they also commonly accepted in countries which do not have any specific certification requirements.

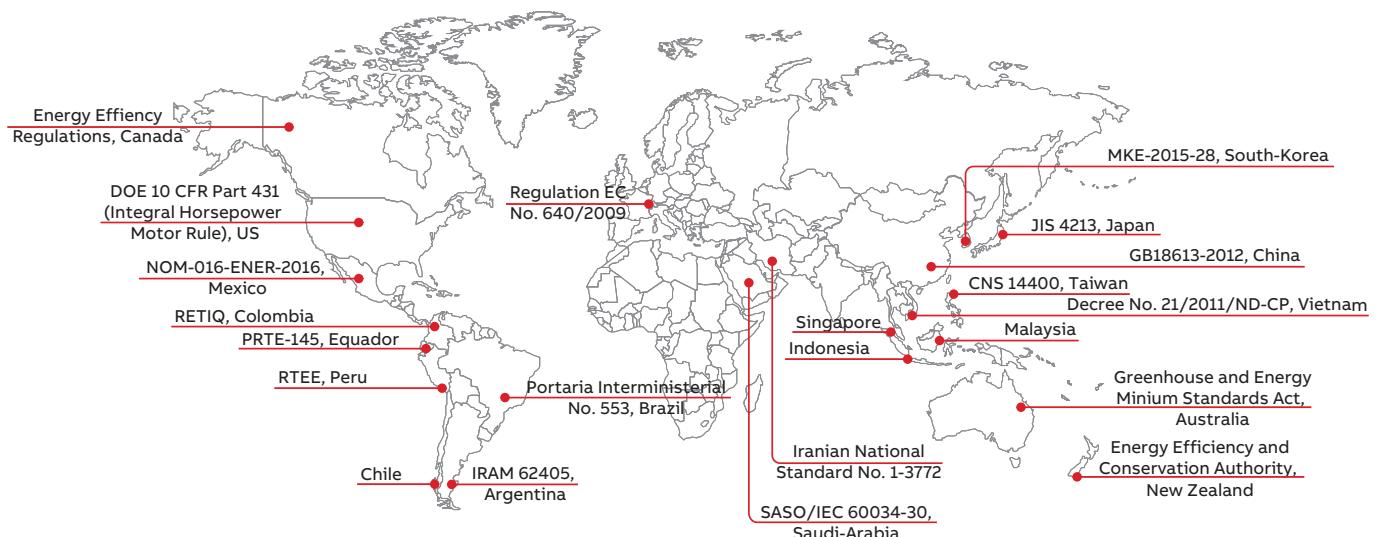

There is number of countries which according to their local regulations require a specific certificate

for equipment installed in explosive atmospheres, examples of such certificates are:

- Inmetro certification for Brazil
- Canadian electric code CEC certification for Canada
- CNEx approval for China, can be issued by bodies like CQST, NEPSI and PCEC
- EAC certificate according to the Customs Union Technical Regulation for Russia, Kazakhstan, Belarus, Armenia and Kyrgyzstan
- PESO certification for India
- Certificates issued by TIIS for Japan
- Certificates issued by KOSHA, KGS or KTL for South Korea
- IA certificates for South Africa issued by laboratories like SABS or Explolabs
- Certificates issued by ITRI for Taiwan
- UkrSEPRO certification for Ukraine
- NEC National electric code certification of USA

ABB is maintaining a wide selection of local certificates for the different products, please refer to the variant code section for each product for information about availability. The marking of the products certified according a specific local certification system is usually differing from the ATEX and IECEx markings, this means that the ATEX and IECEx markings will be replaced with the markings required for the local certification system if a such is ordered.

International motor efficiency standards and regulations

Since the validation of IEC 60034-30:2008 and its refined version IEC 60034-30-1:2014, a worldwide energy efficiency classification system has existed for low-voltage, three-phase asynchronous motors. These international standards are created to enable and increase the level of harmonization in efficiency regulations around the world, including for motors for explosive atmospheres. IEC 60034-30-1:2014 defines International Efficiency (IE) classes for single-speed, three-phase, 50 Hz and 60 Hz induction motors. The efficiency levels defined in IEC 60034-30-1 are based on the test method specified in IEC 60034-2-1:2014. Both standards are part of an effort to unify motor testing procedures with CSA390-10 and IEEE 112 standards, as well as efficiency and product labeling (IE) requirements to enable motor purchasers worldwide to easily recognize premium-efficiency products.

To promote transparency in the market, IEC 60034-30-1 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used, as the different methods can produce differing results.

International standards and regulations for motors in potentially explosive atmospheres or in hazardous locations (HazLoc) are often based on the IEC 60079 series of standards. The IECEX certification scheme is voluntary certification, but it gives a

solid basis for other, regional or local certifications since a third party, both CB/TL, is involved.

Regional and local certification schemes, like ATEX, are based on the same IEC standards but, may have some additional requirement, e.g. marking. Some testing may also be required.

Minimum Energy Performance Standards (MEPS)

While the IEC, as an international standardization organization, sets guidelines for motor testing and efficiency classes, the organization does not regulate efficiency levels in countries. The biggest drivers for mandatory Minimum Energy Performance Standard (MEPS) levels for electric motors are global climate change, government targets to cut CO₂ emissions, and rising electricity demand, especially in developing countries. The whole value chain, from manufacturer to end user, must be aware of the legislation in order to meet local requirements, save energy and reduce their carbon footprint.

It is important to note that even though IEC 60034-30-1 gives efficiency levels for motors in explosive atmospheres, the local regulations will set the mandatory requirement, and e.g. in Europe, Ex motors are not currently included in the scope of regulation 640/2009 but will become from July 2021 when new regulation 2019/1781 enters into force. In Brazil the increased safety ec motors are included in the Brazilian regulator. Similarly, in

—
01 IE Classes - 4-pole
motors.

some countries “explosion-proof” motors may be included or excluded from local regulations.

Harmonized global standards and the increasing adoption of MEPS around the world are good news for all of us. However, it is important to remember that harmonization is an ongoing process. Even though MEPS are already in effect in several regions and countries, they are evolving, and they differ in terms of scope and requirements. At the same time, more countries are planning to adopt their own MEPS regulations. A view of existing and coming MEPS regulations in the world can be seen on the world map above.

To get the latest information please visit, www.abb.com/motors&generators/energyefficiency.

IEC/EN 60034-30-1: 2014

This standard defines four International Efficiency (IE) classes for single-speed electric motors that are rated according to IEC 60034-1 or IEC 60079-0 (explosive atmospheres) and designed for operation on sinusoidal voltage.

- IE4 = Super premium efficiency
- IE3 = Premium efficiency, identical to the table in 10CFR431 ('NEMA Premium') in the USA and CSA C390-10:2015 for 60 Hz
- IE2 = High efficiency
- IE1 = Standard efficiency

IEC 60034-30-1 covers a power range from 0.12 kW up to 1,000 kW. Most different technical constructions of electric motors are covered, as long as they are rated for direct on-line operation. The coverage of the standard includes:

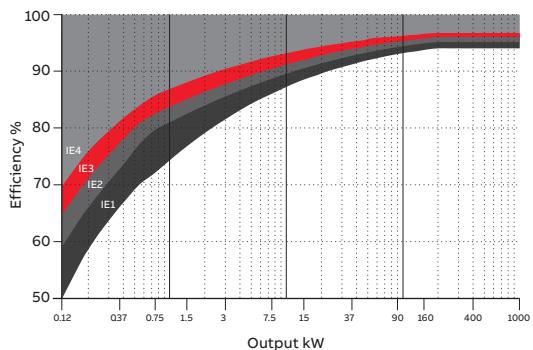

- Single speed electric motors (single and three-phase), 50 and 60 Hz
- 2, 4, 6 and 8 poles
- Rated output P_N from 0.12 kW to 1000 kW
- Rated voltage U_N above 50 V up to 1 kV
- Motors, capable of continuous operation at their rated power with a temperature rise within the specified insulation temperature class
- Motors, marked with any ambient temperature within the range of -20 °C to +60 °C
- Motors, marked with an altitude up to 4000 m above sea level

By comparing IEC 60034-30-1 to CSA C390-10:2015 and 10CFR431 Subpart B (Electric motors), it can be seen that efficiency limits and tables are well aligned, with the major difference being in the scope of the output power, where CSA and 10CFR431 have a maximum power of 500 hp. There are also some minor differences in the scope of excluded motors.

Note: CFR stands for “Code of Federal Regulations.”

The following motors are excluded from IEC/EN 60034-30-1:

- Single-speed motors with 10 or more poles or multi-speed motors
- Motors completely integrated into a machine (for example, pump, fan or compressor) that cannot be tested separately from machine
- Brake motors, when the brake can not be dismantled or separately fed

—
01

ABB and efficiency standards

ABB determines efficiency values according to IEC 60034-2-1 using the low uncertainty method (i.e. summation of losses), with additional load losses determined by the residual loss method.

It is good to mention and emphasize that the IEC 60034-2-1 test method, an indirect method, is technically equivalent to the test methods in the standards CSA 390-10 and IEEE 112 Method B, leading to the equivalent losses and thus efficiency values. Both test methods can be used by ABB, and will be used for both Canada and US, which do not yet recognize IEC 60034-2-1.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high-efficiency products have formed the core of its portfolio for many years. The core of ABB's Process performance range is based on a full range of IE2 and IE3 motors - with many available from stock. We also supply IE4 motors for additional energy savings.

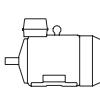

**Minimum efficiency values defined in IEC/
EN 60034-30-1: 2014 (reference values at 50
Hz, based on test methods specified in IEC
60034-2-1 which has been updated to edition
2.0, 2014-06).**

Note: If the motor is mounted shaft upwards, take measures to prevent water or any other liquid from running down the shaft into the motor.

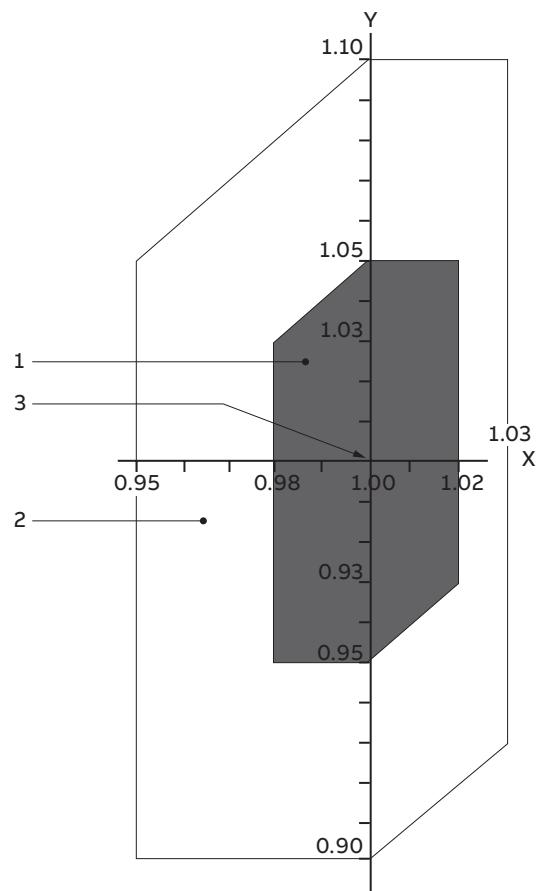

Voltage and frequency

—
01 Voltage and frequency deviation in zones A and B.

The table values for output, speed, efficiency, power factor, starting torque and starting current apply at the rated voltage and frequency. These values will be affected if the supply voltage or frequency deviate from the rated values.

The motors can operate continuously at the rated output, with a long-term voltage deviation of 5 % from the specified value or range of values, and the rated frequency not deviating more than 2% (zone A), without exceeding the temperature class stamped on the rating plate. The temperature rise of the winding may increase by 10 K, but without exceeding the insulation temperature class stamped on the rating plate. Voltage deviations of up to 10 % are permissible for short periods only.

If the motor is subject to continuous voltage variations of +/- 10 % this should be taken into consideration in the design. The permitted combinations of voltage and frequency tolerances are specified in IEC60034-1. This is illustrated in the figure below.

1: Self-circulation
6: Machine-mounted independent component
8: Relative displacement

Degrees of protection: IP code and resistance to impact

Classification for degrees of protection (IP code) provided by enclosures of rotating machines are defined in standards IEC 60034-5 or EN 60529.

means an impact energy strength of 7J for both enclosure and fan cover.

IP protection

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water.

Explanation of the IP code

Ingress protection	Degree of protection to persons and to parts of the motors inside the enclosure	Degree of protection provided by the enclosure with respect to harmful effects due to ingress of water
IP	5	5
	1	2

Position 1

- 2: Motors protected against solid objects greater than 12 mm
- 4: Motors protected against solid objects greater than 1 mm
- 5: Dust-protected motors
- 6: Dust-tight motors

Position 2

- 3: Motors protected against spraying water
- 4: Motors protected against splashing water
- 5: Motors protected against water jets
- 6: Motors protected against heavy seas

Following IEC/EN 60079-0 non-metallic parts of enclosures in motors for explosive atmospheres must be thermal endurance tested for the temperature range the motors are designed for. Non-metallic parts are, for instance, rubber seals and gaskets. Thermal endurance tests and impact tests are carried out before the ingress protection test. This ensures that the motors meet the ingress protection level also after been put in service.

Resistance to impact

ABB's motors for explosive atmospheres have been tested for resistance to impact as described in IEC/EN 60079-0. The more demanding high risk of mechanical danger limits have been used as qualification criteria. For group II and III motors this

Insulation

—
01 Safety margins per thermal class.

ABB uses class F insulation, which, with temperature rise B, is the most common requirement among industry today.

The use of class F insulation with class B temperature rise gives ABB products a 25 °C safety margin. This can be used to increase the loading for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation. For instance, a 10 K temperature reduction will extend the insulation life.

Thermal class 130 (B)

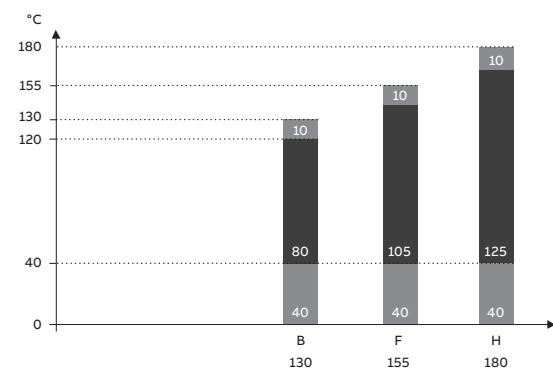

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 80 K
- Hot spot temperature margin 10 K

Thermal class 155 (F)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 105 K
- Hot spot temperature margin 10 K

Thermal class 180 (H)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 125 K
- Hot spot temperature margin 10 K

01

Surface treatment

The surface treatment categorization of ABB motors is based on the ISO 12944 standard. ISO 12994-5 divides paint system durability into three categories: low (L), medium (M), and high (H). Low durability corresponds to a lifetime up to 7 years, medium to 7 – 15 years, high durability 15-25 years, and very high over 25 years.

The durability range is not a guaranteed lifetime. Its purpose is to help the owner of the motor plan for appropriate maintenance intervals. More frequent maintenance may be required because of fading, chalking, contamination, wear and tear, or for other reasons.

ABB's standard surface treatment is corrosivity category C3, durability range M (which equal to medium corrosivity and medium durability). Special surface treatment is available in corrosivity categories C4 and CX. In addition, surface treatment according to the NORSO standard for offshore environments is available as an option.

The standard ABB paint color for motors is Munsell blue 8B 4.5/3.25 except for special systems such as Norsok where a specific color is requested.

Corrosivity category	Outdoor atmospheres	Indoor atmospheres	Use in ABB motors
C1, very low	Not used	Heated buildings with clean atmospheres	Not available
C2, low	Atmospheres with low level pollution, mostly rural areas.	Unheated buildings where condensation may occur, such as depots and sports halls.	Not available
C3, medium	Urban and industrial atmospheres, moderate sulfur dioxide pollution. Coastal areas with low salinity.	Production rooms with high humidity and some air pollution; food processing plants, laundries, breweries, dairies.	Standard treatment
C4, high	Industrial areas and coastal areas with moderate salinity.	Chemical plants, swimming pools, coastal ship- and boatyards.	Optional treatment for cast iron motors, variant code 115
C5, very high (industrial)	Industrial areas and coastal areas with high humidity and aggressive atmosphere.	Buildings or areas with nearly permanent condensation and high pollution.	Not available
CX, very high (marine)	Coastal and offshore areas with high salinity.	Buildings or areas with nearly permanent condensation and high pollution.	Optional treatment for cast iron motors, variant code 754, 711

Atmospheric corrosivity categories and recommended environments.

Low voltage motors and frequency converters for explosive atmospheres

Frequency converters provide significant benefits when used with motors for explosive atmospheres. The advantages include better process control through regulation of the motor speed, as well as energy savings, and therefore improved environmental performance.

Certain criteria must be taken into account to ensure the safety of the frequency converter and motor combination, as well as the maximum usability of the application. The requirements depend on the protection type in use and whether the motor is regarded as being one component within a wider system or a separate subsystem.

ABB offers motors for explosive atmospheres for use with variable speed drives with the following protection types: flameproof, increased safety (on request), non-sparking, and dust ignition proof. These motors are designed and certified for operation with frequency converters. Solutions for the different protection types, as well as for the most common types of converter, are provided below. Further information is provided in the installation, operation and maintenance and safety manual. The flame proof, non-sparking or increased safety Ex ec and dust ignition proof motors covered by this catalogue have been tested with ABB ACS800, ACS880 converters with DTC control, and ACS 550 and ACS580 converters with scalar control or vector control.

1. Thermal dimensioning and protection

The IEC and EN standards sets the requirements for ensuring surface temperature class is not exceeded, the allowed methods does vary slightly between different protection types, generally are the following methods accepted: Combined type test for the duty with the converter, or direct surface temperature protection with embedded temperature sensors such as PTC or Pt100. Tripping temperature of detectors must be selected and certified to protect the surface temperature class of the motor.

	Flameproof Ex d / Ex de or Ex db / Ex db eb T4	Increased safety Ex e or Ex eb, T3	Increased safety Ex ec, T3	Dust ignition proof – Ex t T125°C or T150°C
Criteria for safe operation	Outer surface temperature may not exceed the temperature class	Surface temperature of any part inside or outside the motor may not exceed the temperature class	Surface temperature of any part inside or outside the motor may not exceed temperature class in normal operation	Outer surface temperature may not exceed temperature class (eg. 125°C)
Use with ABB ACS 800, ACS 880 with DTC control, or ACS 550, ACS580 converters	Combination have already been type tested, no need for further testing when specific loadability curves are followed Optional direct surface temperature protection with temperature detectors (VC813 or 816)	Motor must be tested and certified with the specific converter	Combination have already been type tested, no need for further testing when specific loadability curves are followed	Combination have already been type tested, no need for further testing when specific loadability curves are followed Optional direct surface temperature protection with temperature detectors (VC813 or 816), temperature class = T150°C
Use with other type of PWM converters	Mandatory direct temperature protection with temperature detectors (VC813 or 816)	Motor must be tested and certified with the specific converter	Must be tested with the specific converter	Surface temperature protection with temperature detectors (VC813, 816), temperature class T150°C
Operation with frequency converter is included in standard certificates	Yes, in addition is an addendum to the ATEX declaration of conformity available for the combination	No	Yes, in addition is an addendum to the ATEX declaration of conformity available for the combination	Yes, in addition is an addendum to the ATEX declaration of conformity available for the combination

Use of motors with a temperature class requiring a lower surface temperature than indicated in table, must be dimensioned case by case, a combined type test of converter and motor is usually required to verify safe operation.

1.1 Protection with temperature detectors

All ABB Ex motors cast iron frame and aluminum frame motors in frame size 200 and above are equipped with PTC thermistors to prevent the winding temperature from exceeding the thermal limits of the insulation materials (usually F class or maximum 155°C). Connection of the standard thermistors is not mandatory but recommended.

Optionally can the thermistors mounting in the stator winding be dimensioned and certified to also protect the surface temperature of flame proof motors with temperature class T4 and dust ignition proof motors with temperature class T150°C. This is done by adding variant code 813. For motors which have been tested together with the converter is the use of such temperature detectors optional when the designated loadability curves in section 7 are followed, but still recommended as they provide useful additional protection. For non-tested combinations, like when used with converters of other brands than ABB, are they mandatory to use unless a separate combined test is arranged. Variant code 816 should be used if surface temperature protection using Pt100 is preferred.

—
01 Permitted phase to phase voltage peaks at motor terminals as a function of rise time.

Surface temperature protection with temperature detectors cannot be reliably arranged in increased safety and non-sparking motors as these protection types includes protection of all surface temperatures, external and internal. In such motors will the temperature detectors only protect the insulation.

In countries where the ATEX directive is in force must thermistors or other temperature detectors, if connected, be connected to an ATEX approved relay that does function independently and does reliably trip off the supply to the motor. Such approved temperature detector relays are available as a standard integrated option to many frequency converters from ABB, but can also be separate controlling the supply to the converter.

2. Operating speed

When a motor is used with a frequency converter, its actual operating speed may deviate considerably from its nominal speed (i.e. the speed stamped on the rating plate). When operating at higher speeds, ensure that the highest permissible rotational speed of the motor, or the critical speed of the equipment as a whole, is not exceeded.

The permitted maximum speed must be stated on a rating plate. This can be either a separate plate or the regular plate required for variable speed drive motors.

3. Rating plates

The EN and IEC standards require that the motors which are used in variable speed operation are provided with a rating plate that show the parameters for which the motor is intended. There are two different types of rating plates available, one generic plate that show loadability values in percent of the nominal torque. This plate can be ordered using variant code 181. The other plate is have order specific data, this can be ordered using variant code 163.

These parameters shall be used while checking the suitability of a specific motor for its intended application and for setting the limits of operation for the converter.

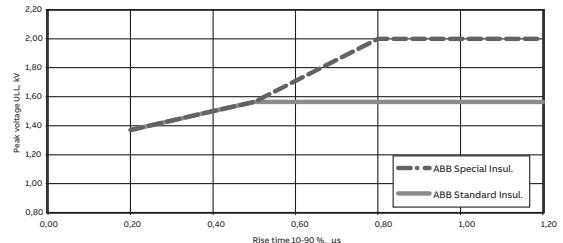

4. Winding insulation

The output voltage of voltage source frequency converters consists of steep voltage pulses. These pulses can be even higher and steeper when arriving at the motor terminals due to reflecting pulses in the cables. The motor's insulation must therefore be selected according to the actual pulses at the motor terminals.

4.1 Phase to phase voltages

The maximum permitted phase to phase voltage peaks at the motor terminals as a function of pulse rise time can be seen in Figure 1.

The highest curve ("ABB Special Insulation") applies to random wound motors with a special winding insulation for frequency converter supply, variant code 405. The "ABB Standard Insulation" curve applies to all other random wound motors covered by this catalog.

—
01

4.2 Phase to ground voltages

The permitted phase to ground voltage peaks at the motor terminals are:

- Standard Insulation 1300 V peak
- Special Insulation 1800 V peak

4.3 Selection of winding insulation for motors used with ABB converters

In the case of ABB ACS800, ACS 880, ACS550 and ACS580 single drives with a diode supply unit (uncontrolled DC voltage), the motor winding insulation and frequency converter output filters can be selected using Table 2.

Nominal supply voltage U_N of converter	Winding insulation and filters required
Nominal supply voltage U_N of converter $U_N \leq 500$ V	Standard insulation
Nominal supply voltage U_N of converter $U_N \leq 600$ V	ABB Standard insulation + dU/dt filters OR ABB Special insulation (variant code 405)
Nominal supply voltage U_N of converter $U_N \leq 690$ V	ABB Special insulation (variant code 405) AND dU/dt-filters at converter output
Nominal supply voltage U_N of converter $600 < U_N \leq 690$ V cable length > 150 m	ABB Special insulation (variant code 405)

Table 2. Selection of motor winding insulation and converter output filters for motors supplied by ABB ACS800, ACS880, ACS550 or ACS 580 drives with uncontrolled DC voltage.

4.4 Selection of winding insulation with all other converters

The voltage stresses must be restricted so they remain below the accepted limits given in paragraphs 4.1 and 4.2. The effect of any filters that are fitted must be taken into account when dimensioning the motor.

5. Bearing currents

Bearing voltages and currents must be avoided in all variable speed applications to ensure the reliability and safety of the application. For this purpose insulated bearings or bearing constructions, common mode filters and suitable cabling and grounding methods must be used.

5.1 Elimination of bearing currents with ABB ACS800, ACS880 and ACS550 converters

In the case of ABB ACS800, ACS880, ACS550 and ACS580 converters with a diode supply unit (uncontrolled DC voltage), the following methods must be used to avoid harmful bearing currents in the motors:

Frame size	Preventive measures
250 and smaller	No action needed
280-315	Insulated non-drive end bearing
355-450	Insulated non-drive end bearing AND Common mode filter at the converter

Common mode filters

Common mode filters reduce common mode currents and thus decrease the risk of bearing currents. Common mode filters do not significantly affect the phase or main voltages on the motor terminals. For more information, please see ABB Drives catalogues.

Insulated bearings

Bearings with aluminum oxide insulated and sealed inner or outer bores are used as standard with variant code 701. Hybrid bearings, i.e. bearings with non-conductive ceramic rolling elements, can also be used in special applications. More information on selection of the correct parts is available on request.

5.2 Elimination of bearing currents with all other converters

The user is responsible for protecting the motor and driven equipment from harmful bearing currents. The instructions provided in section 5.1 can be followed, but their effectiveness cannot be guaranteed in all cases.

6. Cabling, grounding and EMC

The use of a frequency converter places greater demands on the cabling and grounding of the drive system. To ensure proper grounding of the system, EMC compliance and avoiding bearing currents should the instructions given in the installation, operation, maintenance manual be followed. EMC cable glands providing 360° bonding of a concentric PE conductor are available using variant code 704, also many flameproof glands for armoured cable provide similar bonding.

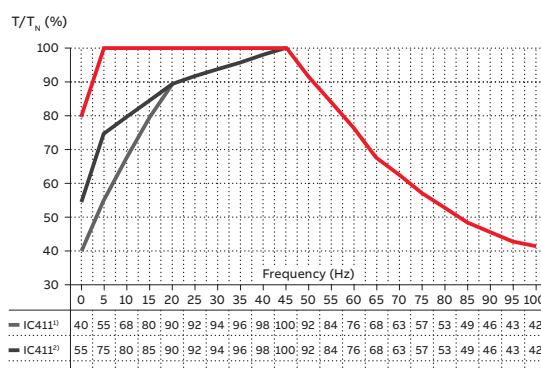

7. Loadability curves

The loadability curves presented below are based on combined tests of different motors together with the converter types listed. The loadability curves assume that the nominal frequency of the motor (i.e. field weakening point) is 50 or 60Hz. The curves presents the maximum allowed torque in percentage of the nominal direct on line torque of the motor over the speed range.

7.1 Loadability curves with ACS800/880 converters utilizing DTC control

50 Hz fwp

Flameproof motors Ex db / Ex db eb T4 frame sizes 80-400
Dust ignition protection motors Ex t T150°C frame sizes 71-400

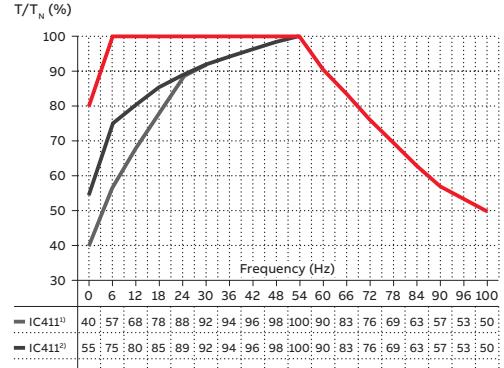

¹⁾ Self ventilated, IEC frame size 71 - 132

²⁾ Self ventilated, IEC frame size 160 - 400

³⁾ Separate motor cooling (force ventilated), IEC frame size 160 - 400

60 Hz fwp

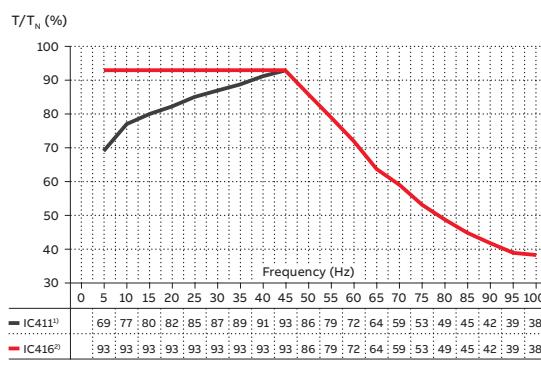

¹⁾ Self ventilated, IEC frame size 71 - 132

²⁾ Self ventilated, IEC frame size 160 - 400

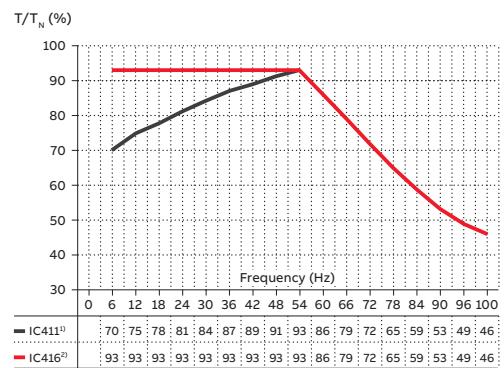

³⁾ Separate motor cooling (force ventilated), IEC frame size 160 - 400

Flameproof motors Ex db / Ex db eb T4 frame size 450
Dust ignition protection motors Ex t T150°C frame size 450

¹⁾ Self ventilated, IEC frame size 450

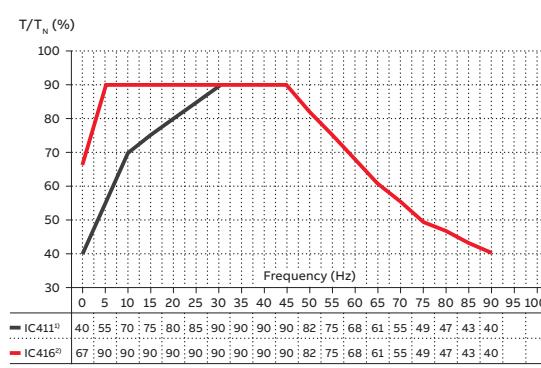

²⁾ Separate motor cooling (force ventilated)

¹⁾ Self ventilated, IEC frame size 450

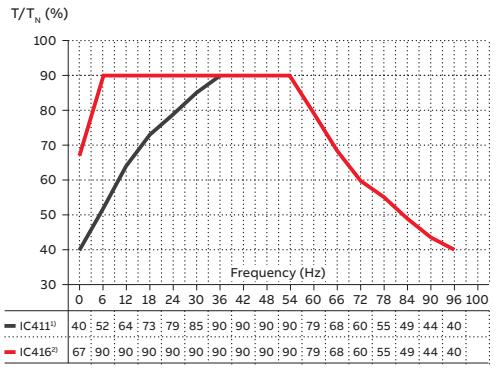

²⁾ Separate motor cooling (force ventilated)

Increased safety Ex ec T3 cast iron or aluminum frame motors
Dust ignition protection cast iron or aluminum frame motors Ex t T125°C

¹⁾ Self ventilated, IEC frame size 71 - 450

²⁾ Separate motor cooling (force ventilated)

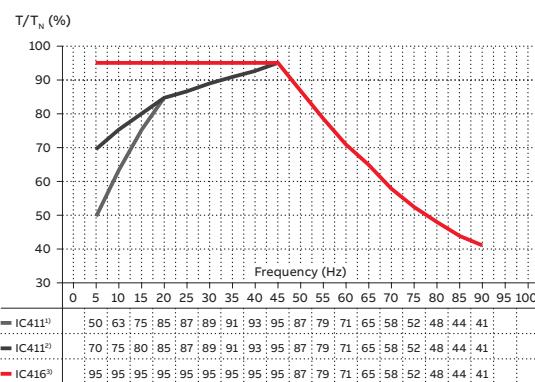

¹⁾ Self ventilated, IEC frame size 71 - 450

²⁾ Separate motor cooling (force ventilated)

7.2 Loadability curves with ACS550/580 converters with vector or scalar control

50 Hz fwp

Flameproof motors Ex db / Ex db eb T4 frame sizes 80-400
Dust ignition protection motors Ex t T150°C frame sizes 71-400

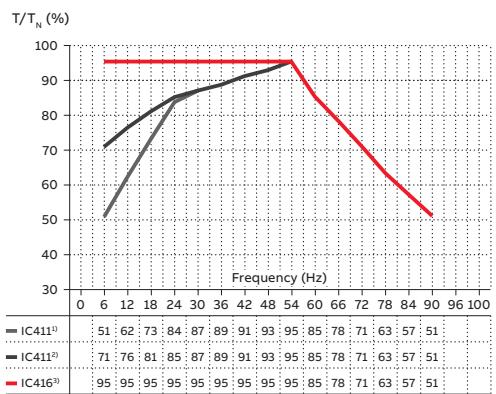

⁽¹⁾ Self ventilated, IEC frame size 71 - 132

⁽²⁾ Self ventilated, IEC frame size 160 - 400

⁽³⁾ Separate motor cooling (force ventilated), IEC frame size 160 - 400

60 Hz fwp

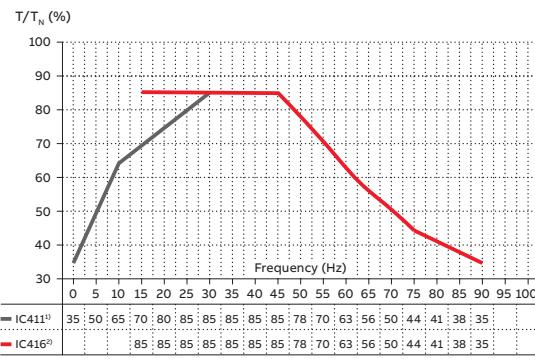

⁽¹⁾ Self ventilated, IEC frame size 71 - 132

⁽²⁾ Self ventilated, IEC frame size 160 - 400

⁽³⁾ Separate motor cooling (force ventilated), IEC frame size 160 - 400

Note: The lower speed limit for constant torque load is 15 Hz or 18 Hz.

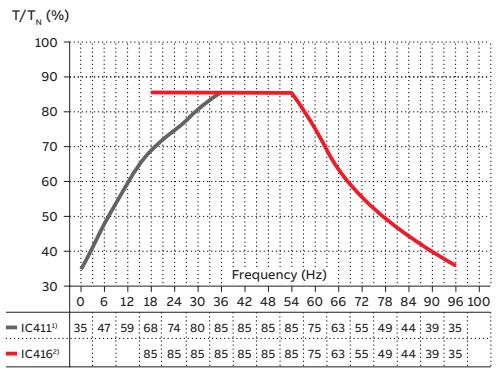

Increased safety Ex ec T3 motors frame sizes 71-450

⁽¹⁾ Self ventilated, IEC frame size 71 - 450

⁽²⁾ Separate motor cooling (force ventilated)

Note: The lower speed limit for constant torque loads is 15Hz.

⁽¹⁾ Self ventilated, IEC frame size 71 - 450

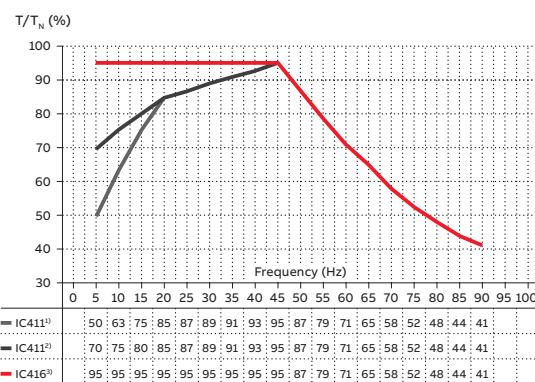

⁽²⁾ Separate motor cooling (force ventilated)

Note: The lower speed limit for constant torque loads is 18Hz.

7.3 Loadability with other PWM converters utilizing scalar or vector control

50 Hz fwp

Flameproof motors Ex db / Ex db eb T4 frame sizes 80-400
Dust ignition protection motors Ex t T150°C frame sizes 71-400

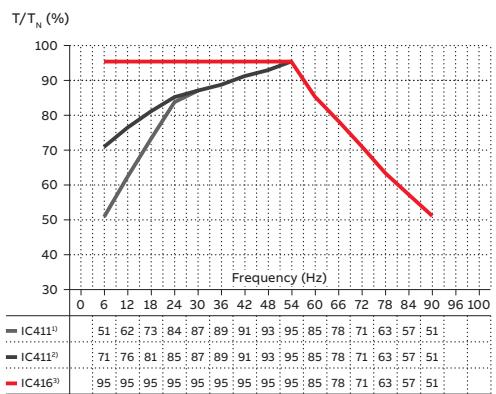

¹⁾ Self ventilated, IEC frame size 71 - 132

²⁾ Self ventilated, IEC frame size 160 - 400

³⁾ Separate motor cooling (force ventilated), IEC frame size 160 - 400

60 Hz fwp

¹⁾ Self ventilated, IEC frame size 71 - 132

²⁾ Self ventilated, IEC frame size 160 - 400

³⁾ Separate motor cooling (force ventilated), IEC frame size 160 - 400

Note: Direct temperature protection with PTC or Pt100 is required (see section 1.1), the lower speed limit for constant torque load is 15Hz for 50Hz fwp and 18Hz for 60Hz fwp.

Rating plates

—
01 Sample rating plate for IE2 motors in frame sizes 80-450.

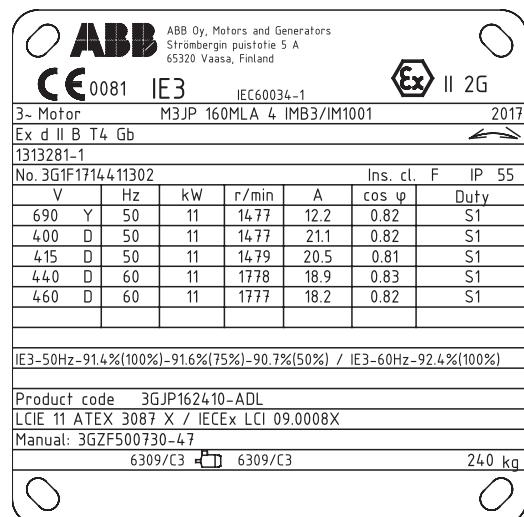

02 Sample rating plate for IE3 motors in frame sizes 80-450.

The rating plates are in table form giving the speed, current, power factor and duty type for the given supply voltage and frequency.

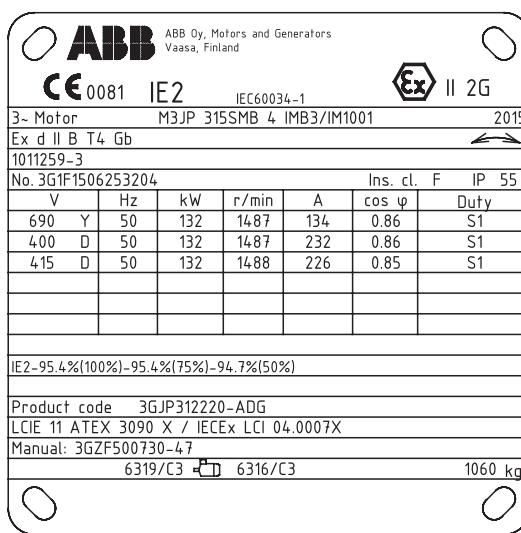

The following information will be shown on the motor rating plate:

- Lowest nominal efficiency at 100 %, 75 % and 50 %rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number (both ATEX and IECEx are stamped on the rating plate as standard)

The plate samples shown on this page present typical data rows. The actual content of the plate may vary according to your order and according to the motor's IE class. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

Variant codes

Flameproof motors Ex db IIB/IIC T4 Gb

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Most of the variant codes apply to IE2 and IE3 motors. However, confirm the availability of variants for IE3 motors with your ABB sales office before making an order.

Mechanical design

Motor frame and drain holes

—
01 Drain plugs located in lowest position of motor.

02 Drain plug in lowest position of motor.

Motor frame

The motor frame, end shields and terminal box are made of cast iron. Motors in frame size 200 and larger have integrated feet for rigid and vibration free mounting, motors in frame size 80-180 have detachable feet made of forged steel for maximum flexibility and rigidity.

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Flameproof Ex db motors are provided without drain holes and plugs as standard.

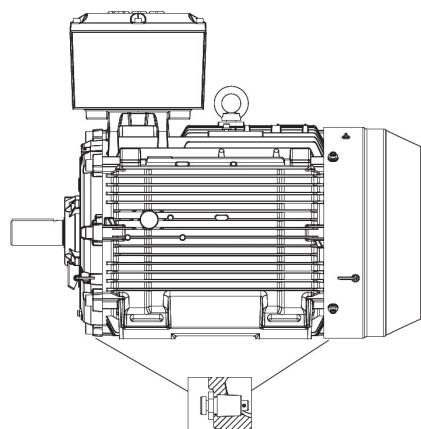

It's recommended that motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes with plugs to ensure that water possibly condensed inside the enclosure can easily be drained. Flameproof drain plugs which can be easily opened and closed are available as an option for motors in frame size 160 and larger. Please refer to the variant code section, variant 448 under heading "Drain holes".

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

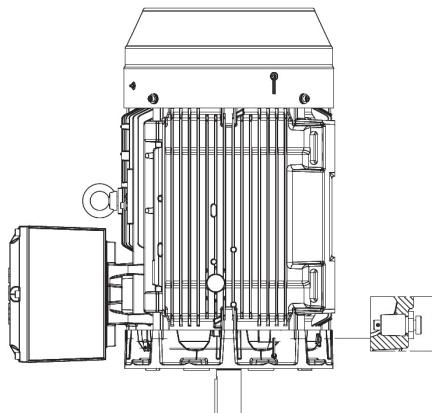

Lifting lugs

All motors are equipped with lifting lugs for safe lifting of the motor. The lugs are designed for lifting the motor only, they may not be used for lifting the motor and the equipment on which it is mounted.

Frame size	Type of lugs	Horizontal mounting B3, B35	Vertical mounting V1, V3
80-112	Integrated in casting	2 pcs close to terminal box on top	2 pcs close to terminal box
132	Integrated in casting	1 pcs at D-end, 1 pcs at N-end	1 pcs at D-end, 1 pcs at N-end
160-180	Detachable eye bolt	1 pcs close to terminal box on top	2 pcs, either at N-end or D-end depending on need
200-250	Integrated in casting	1 pcs at D-end, 1 pcs at N-end	2 pcs at N-end, 2 pcs at D-end
280-450	Detachable eye bolt	1 pcs close to terminal box on top	2 pcs, either at N-end or D-end depending on need

Mechanical design

Heating elements

Heating elements are installed on stator winding coil heads to keep the winding dry and free of corrosion in humid conditions. The power of the heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motor size	80	90	100	112	132	160	180
Power (W)	25	25	25	25	25	25	25

Motor size	200	225	250	280	315	355	400	450
Power (W)	25	60	60	60	2x60	2x60	2x60	2x100

Motors for marine applications mounted on open deck may have heating element powers differing from the ones shown in this table.

Mechanical design

Bearings

ABB's flameproof motors are normally fitted with single-row deep-groove grease lubricated ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037. Note that the possibility to have roller bearing at D-end is limited on larger flameproof motors due to the higher radial clearance in bearing and possible bending of shaft together with narrow flame path between shaft and inner bearing cover, especially in conjunction with gas group IIC design.

dispatch to prevent damage to bearings during transport. A warning label is attached to motors when transport locking is used.

When high axial forces are involved, angular-contact ball bearings should be used. When ordering a motor with an angular-contact ball bearing, specify also the method of mounting and the direction and magnitude of axial force to ensure that optimal bearing system design is chosen. The variant codes for ordering angular-contact ball bearings are 058 and 059.

¹⁾ On request

Axially-locked bearings

All motors are equipped as standard with an axially locked bearing at the D-end.

Locking may also be fitted in other cases if severe transport conditions are expected.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before

Bearing seals

Table on next page present the standard and alternative and types of bearing seals per motor size.

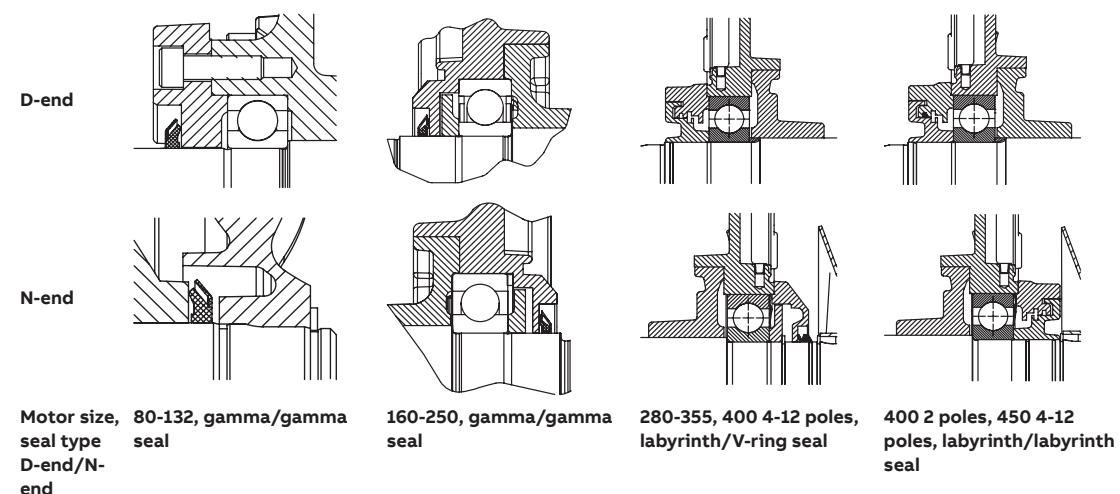

Bearing seals

Standard design

Alternative design

Bearing life and lubrication

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes up to 315 $\geq 100,000$ hours.

Lubrication

On delivery, motors in frame size 160 and above are pre-lubricated with high-quality grease. Before first start-up, see instructions for re-lubrication and recommended grease in the installation, operation, maintenance and safety manual for low voltage motors for explosive atmospheres delivered together with the motor, or see the lubrication plate on the motor.

Motors with bearings greased for life

Motors in frame sizes 80-132 are equipped with bearings greased for life, while this is available as an option for frame sizes 160-250. Bearings are lubricated with high-quality, high-temperature grease. Bearing types are stated on the rating plate. The approximate lifetime of bearings in four-pole motors is about 40 000 duty hours. Lifetime is subject to the load conditions of the application run by the motor.

Lubrication intervals in duty hours for ball bearings

Frame size	Amount of grease g/bearing	Amount of grease g/N-end	Speed 3600 r/min	Speed 3000 r/min	Speed 1800 r/min	Speed 1500 r/min	Speed 1000 r/min	Speed 500-900 r/min

450	95	70	-	-	2500	3900	7700	8700

Motors with re-lubrication nipples

In frame sizes 160-450, the bearing system is provided with valve discs to ease lubrication. Motors are lubricated while running. The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1-2 hours after re-greasing. This ensures that the construction is tight and bearings remain dust- and dirt-free.

A grease-collection method can be used optionally.

The following tables show lubrication intervals according to the L_1 principle for various nominal speeds in 25 °C ambient temperature. These values apply to horizontally mounted motors (B3) with 80 °C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Lubrication intervals in duty hours for roller bearings

Frame size	Amount of grease g/bearing	Amount of grease g/N-end	Output kW	Speed 3600 r/min	Speed 3000 r/min	Output kW	Speed 1800 r/min	Speed 1500 r/min	Output kW	Speed 1000 r/min	Output kW	Speed 500-900 r/min

Mechanical design

Radial forces

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Where:

D: pulley diameter, mm

P: power requirement, kW

n: motor speed, r/min.

K: belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5

F_R : permissible radial force, refer to tables below.

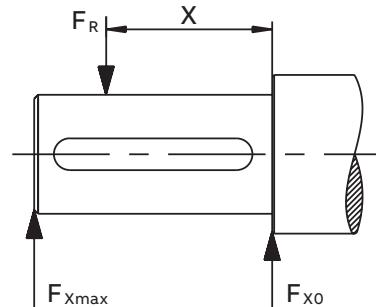

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force F_R can be calculated with the following formula:

$$F_R = F_{x0} - \frac{X}{E} (F_{x0} - F_{x\max})$$

Where:

E: length of the shaft extension in the standard version

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life L_{10h} of 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

Permissible radial forces

Mechanical design

Axial forces

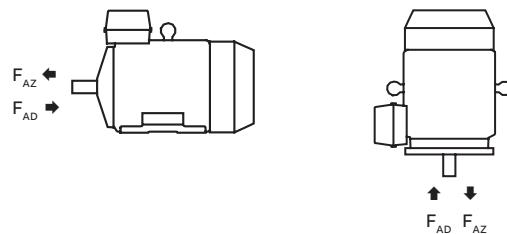

—
01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

Terminal box

Standard terminal box

Degree of protection and mounting options

The degree of protection for the standard terminal box is IP 55. It complies with the requirements of the type of protection 'd' flame proof and prevents the transmission of an internal explosion to the surrounding, potentially explosive atmosphere.

By default, terminal boxes are mounted on top of the motor at D-end. Side mounted terminal box is possible in frame sizes 160 and 180. Mounting at N-end is also possible for the larger frame sizes. Please refer to the variant code section for more details.

Turnability

The standard terminal boxes for motor sizes 80-250 can be turned 4*90° and in sizes 280-450 2*180° after delivery. For sizes 280-450 is also mounting of terminal box with opening towards D or N-end possible using the relevant variant codes when ordering.

Cable entries

Terminal box is provided as standard with tapped holes for cable glands as specified in the table on next page. No cable glands are included as standard, the entry holes are closed with Ex d approved blanking plugs made of brass according to the table on the next page. One tapped hole for main cables is closed with a plastic plug which is to be used for transport protection only. Different types of cable glands are available as option, suitable for either armoured and non-armoured cables, please refer to the Terminal box alternatives section for more details.

Cable type and terminations

Terminations are suitable for copper and aluminum cables (Al-cables on request for motor sizes 80 to 250). Cables are connected to terminals by cable lugs, which are not included in the delivery.

Earthing bolts

The motors are as standard provided with at least one earthing bolt inside the terminal box and another on the frame. The earthing bolt on the frame is located on top close to the terminal box for easy access from either side of the motor. As an option can also earthing bolts on the feet be provided, please refer to variant code section.

Ordering

To ensure the delivery of desired terminations and cable entries for the motor, state the cable type, quantity, size, outer diameter and possibly type of cable glands needed when ordering. Modifying the cable entries on a flame proof terminal box is very difficult afterwards.

See section Variant codes for all options available.

Standard delivery

Standard delivery if no other information is provided. For other network voltages than voltage code D (see Ordering information section).

Terminal box

Terminal box alternatives

Due to the construction of the Ex d terminal box is it not possible to mount any connection flanges, angle adapters nor cable sealing units like on motors having increased safety Ex e terminal box.

Cable glands

The motors are delivered as standard with plugged cable entries as described in the previous section. There is a broad selection of different type of cable glands available which are suitable for different types of cable and outer diameter ranges. As it is very difficult to change the amount and size of cable glands afterwards, is it extremely important that these are selected carefully.

Motor frame size	Cable entries for auxiliaries	NPT plug
80-112	1 x 3/4"	-
132	1 x 3/4"	1 x 3/4"
160-450	2 x 3/4"	2 x 3/4"

Size of threaded opening for cable gland	Cable gland Ex d IIC for armoured cable with double sealing, variant code 734		Cable gland Ex d IIC for non-armoured cable, variant code 735	
	NPT (Variant code 730 added)	Cable outer diameter, mm	Inner sheath diameter, mm	Cable outer diameter, mm
M16 x 1.5	-	7-12	4.5-8	-
M20 x 1.5	NPT 1/2"	10-16	6-10	4-8.5

M75 x 1.5	NPT 2 1/2"	58-70	48-60	46-60

*) = High capacity version, delivered as standard with the variant code.

Threaded openings for cable glands with NPT thread (variant code 730)

The motors are delivered as standard with openings for cable glands with metric threads as listed in the section describing the standard terminal box. If glands with NPT threads will be used must variant code 730 be ordered. If nothing else is stated on the ordered will the sizes in tables below be delivered. If cable glands are also needed must either variant 734 or 735 be added.

Motor frame size	Main cable entries	NPT plug
80-112	1 x 3/4"	-
132	2 x 3/4"	1 x 3/4"
160-180	2 x 1 1/4"	1 x 1 1/4"
200-250	2 x 1 1/2"	1 x 1 1/2"
280	2 x 2"	1 x 2"
315-450	2 x 3"	1 x 3"

Threaded openings for cable glands of non-standard size

If the standard size of threaded openings for cable glands does not suit the gland size and cable that will be used can openings of nonstandard size also be delivered, either by fitting a reducers to make the openings smaller or by increasing the amount or size of holes. The maximum possible size and amount for each motor frame size is listed below.

Motor frame size	Main cable entries, metric	Main cable entries, NPT
80-132	1 x M32	1 x 1"
160-180	1 or 2 x M50	1 or 2 x 1 1/2"
200-250	1 or 2 x M63	1 or 2 x 2"
280-450	1 or 2 x M75	1 or 2 x 3"

Auxiliary terminal box

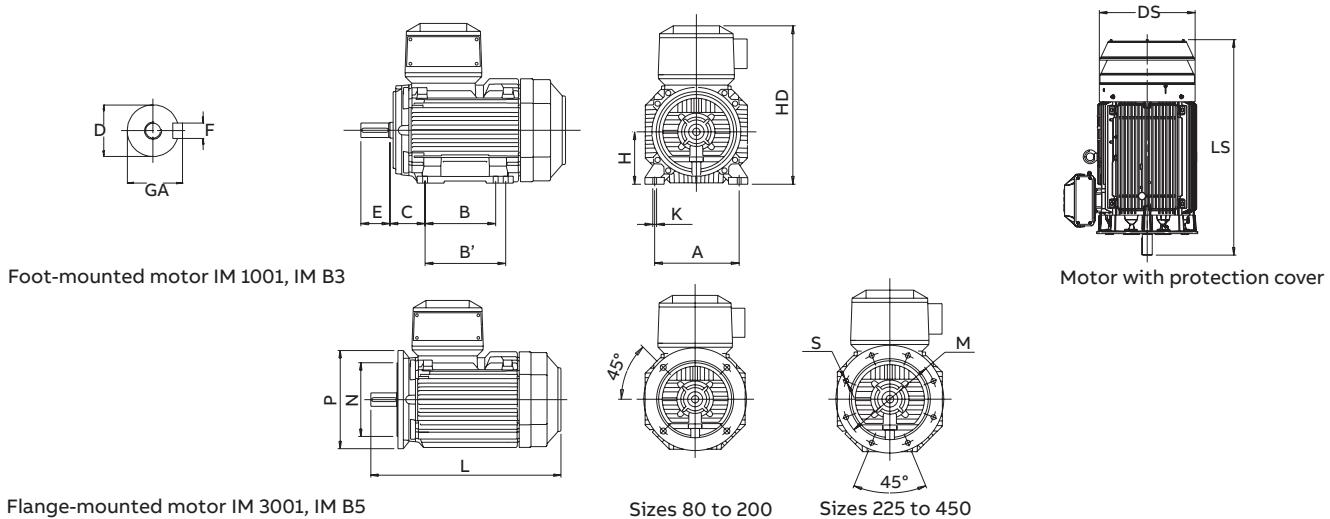

It is possible to equip motors from frame size 132 upwards with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box is made of cast iron with Ex d type of protection. Connection terminals are of spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. The auxiliary terminal boxes are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard. The standard cable entry is 2 x M20 with plugged entries. If cable glands are needed must these be ordered using the variant codes described earlier in this section.

ABB

EU DECLARATION OF CONFORMITY

The Manufacturer:

ABB Oy
Motors and Generators
P.O. Box 633
Szintrabergen Pusztak 5 A
FIN-65101 Vaasa, Finland

ABB Sp.z.o.o.
27 Plac Cygańska Str.
PL-05-070 Oleśnica Łódzki
Poland

This declaration of conformity is issued under the sole responsibility of the manufacturer.

The products: 3-phase induction motors of series M3AA, M3DP, M3GP, M3HP, M3JP, M3JC, M3JM & M3KP and M3KC as listed in this document on the pages 2 - 3 having correspondent name plate markings covered by those as listed.

The motors of the declaration described above are in conformity with the relevant Union harmonization legislation:

Directive 2011/65/EU

The following harmonized standards are applied in relation to which conformity is declared: EN 60079-0/4/A11/2013⁹, EN 60079-1/2014⁹, EN 60079-7/2007, EN 60079-7/2015⁹, EN 60079-15/2010, EN 60079-31/2014⁹ and relevant parts of the EN 60034 –series of standards.

Directive 2009/125/EC (eP of 20th November 2009)

Motors are considered as IED, IE3 or IE4 in conformity with the requirements set in the Commission Regulation (EU) No. 640/2009 of 20th November 2009 amending Regulation (EC) No. 640/2008. Efficiency classes as defined in the standard EN 60034-30:2009.

Directive 2011/65/EU

Motors are in conformity with the Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on restriction of the use of certain hazardous substances in electrical and electronic equipment and technical documentation based on the standard EN 600518:2012.

The conformity of the end product according to the Directive 2006/42/EC has to be established by the commissioning party when the motor is fitted to the machine.

Note: Motors have to be installed and maintained according to the relevant standards and instructions of ABB Oy, Motors and Generators. When installed in converter supplied application, additional requirements must be respected. The user has to make sure that the motor was installed in accordance with the appropriate dedicated addendum.

Notified Bodies (ExNb): LOE (2001), Av. Da Gama Lopes, 32, 22265 Fontenay-aux-Roses, France and VTT Expert Service Ltd (0537), Otakaan 7B, 02044 Espoo, Finland

Signed for and on behalf of: ABB Oy, Motors and Generators and ABB Sp.z.o.o

Pace and date of issue: Vaasa, Finland, 2017-03-27

Harm Mykkälänen

Motors in brief

Flameproof motors Ex db, sizes 80 to 180

Motor size	80	90	100	112	132	160	180
Stator	Material	Cast iron, EN-GJL-200 or better					
	Paint color shade	Blue, Munsell 8B 4.5/3.25					
	Corrosion class	C3 medium according to ISO/EN 12944-5					
Feet		Forged steel, detachable feet					
Bearing end shields	Material	Cast iron, EN-GJL-200 or better					
	Paint colour shade	Blue, Munsell 8B 4.5/3.25					
	Corrosion class	C3 medium according to ISO/EN 12944-5					
Bearings	D-end 2-12 poles	6205-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C	6208-2Z/C3	6309/C3
	N-end 2-12 poles	6204-2Z/C3	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309/C3
Axially locked bearings	Inner bearing cover	As standard, locked at D-end					
Bearing seals		Gamma ring					
Lubrication		Permanent grease lubrication				Regreasable bearings	
SPM nipples		-				As standard	
Rating plate	Material	Stainless steel					
Terminal box	Frame material	Cast iron, EN-GJL-200 or better					
	Cover material	Cast iron, EN-GJL-200 or better					
	Cover screws material	Acidproof steel A4-80				Steel 8.8, zinc electroplated and chromated.	
Connections	Cable entries	1 x M25 + 1 x M20 plugged	2 x M32 + 1 x M20 plugged			2 x M40 + 2 x M20 plugged	
	Terminals	6 terminals for connection with cable lugs (not included)					
Fan	Material	Polyamide. Reinforced with glass fibre.				Polypropylene. Reinforced with glass fibre.	
Fan cover	Material	Steel			Hot dip galvanized steel		
	Paint color shade	Munsell blue 8B 4.5/3.25					
	Corrosion class	C3 medium according to ISO/EN 12944-5					
Stator winding	Material	Copper					
	Insulation	Insulation class F					
	Winding protection	3 pcs thermistors as standard					
Rotor winding	Material	Pressure die-cast aluminum					
Balancing		Half-key balancing					
Keyway		Closed					
Heating elements	On request	25 W					
Drain holes	-					Optional	
External earthing bolt		As standard					
Enclosure		IP 55					
Cooling method		IC 411

Rating plates

—
01 Sample rating plate for IE2 motors in frame sizes 80-450.

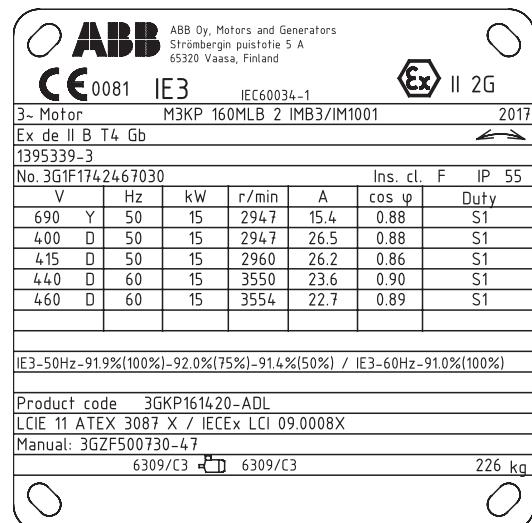

02 Sample rating plate for IE3 motors in frame sizes 80-450.

The rating plates are in table form giving the speed, current, power factor and duty type for the given supply voltage and frequency.

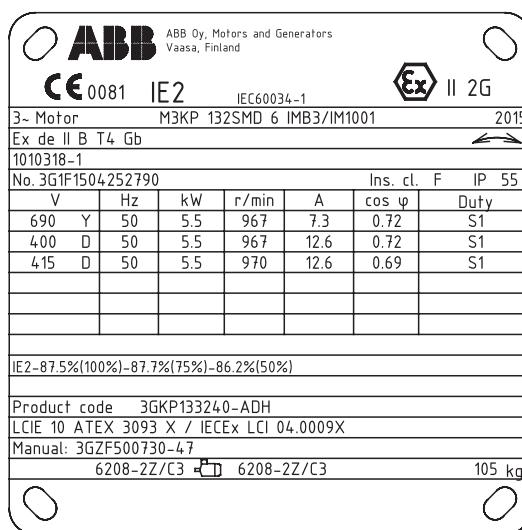

The following information will be shown on the motor rating plate:

- Lowest nominal efficiency at 100 %, 75 % and 50 % rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number (both ATEX and IECEx are stamped on the rating plate as standard)

The plate samples shown on this page present typical data rows. The actual content of the plate may vary according to your order and according to the motor's IE class. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

Variant codes

Flameproof motors Ex db eb IIB/IIC T4 Gb

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Most of the variant codes apply to IE2 and IE3 motors. However, confirm the availability of variants for IE3 motors with your ABB sales office before making an order.

Mechanical design

Motor frame and drain holes

Motor frame

The motor frame, end shields and terminal box are made of cast iron. Motors in frame size 200 and larger have integrated feet for rigid and vibration free mounting, motors in frame size 80-180 have detachable feet made of forged steel for maximum flexibility and rigidity.

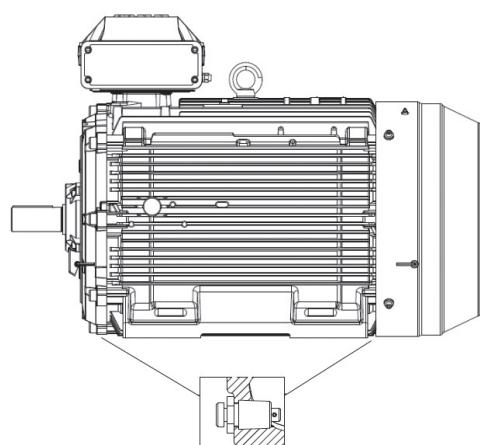

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Flame proof Ex de motors are provided without drain holes and plugs as standard.

It's recommended that motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes with plugs to ensure that water possibly condensed inside the enclosure can easily be drained. Flame proof drain plugs which can be easily opened and closed are available as an option for motors in frame size 160 and larger. Please refer to the variant code section, variant 448 under heading "Drain holes".

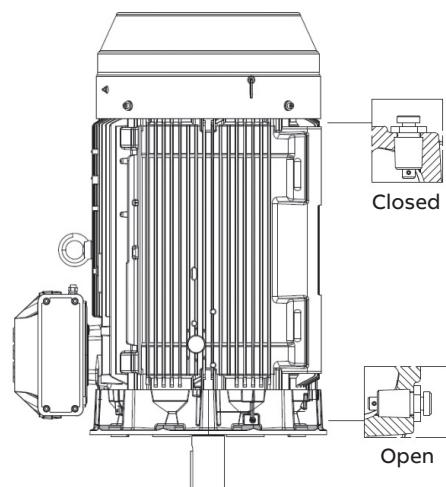

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

Lifting lugs

All motors are equipped with lifting lugs for safe lifting of the motor. The lugs are designed for lifting the motor only, they may not be used for lifting the motor and the equipment on which it is mounted.

Frame size	Type of lugs	Horizontal mounting B3, B35	Vertical mounting V1, V3
80-112	Integrated in casting	2 pcs close to terminal box on top	2 pcs close to terminal box
132	Integrated in casting	1 pcs at D-end, 1 pcs at N-end	1 pcs at D-end, 1 pcs at N-end
160-180	Detachable eye bolt	1 pcs close to terminal box on top	2 pcs, either at N-end or D-end depending on need
200-250	Integrated in casting	1 pcs at D-end, 1 pcs at N-end	2 pcs at N-end, 2 pcs at D-end
280-450	Detachable eye bolt	1 pcs close to terminal box on top	2 pcs, either at N-end or D-end depending on need

Mechanical design

Heating elements

Heating elements are installed on stator winding coil heads to keep the winding dry and free of corrosion in humid conditions. The power of the heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motors for marine applications mounted on open deck may have heating element powers differing from the ones shown in this table.

Mechanical design

Bearings

ABB's flameproof motors are normally fitted with single-row deep-groove grease lubricated ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037. Note that the possibility to have roller bearing at D-end is limited on larger flameproof motors due to the higher radial clearance in bearing and possible bending of shaft together with narrow flame path between shaft and inner bearing cover, especially in conjunction with gas group IIC design.

dispatch to prevent damage to bearings during transport. A warning label is attached to motors when transport locking is used.

When high axial forces are involved, angular-contact ball bearings should be used. When ordering a motor with an angular-contact ball bearing, specify also the method of mounting and the direction and magnitude of axial force to ensure that optimal bearing system design is chosen. The variant codes for ordering angular-contact ball bearings are 058 and 059.

¹⁾ On request

Axially-locked bearings

All motors are equipped as standard with an axially locked bearing at the D-end.

Locking may also be fitted in other cases if severe transport conditions are expected.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before

Bearing seals

Table on next page present the standard and alternative and types of bearing seals per motor size.

Standard design

Alternative design

Bearing life and lubrication

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes up to 315 $\geq 100,000$ hours.

Lubrication

On delivery, motors in frame size 160 and above are pre-lubricated with high-quality grease. Before first start-up, see instructions for re-lubrication and recommended grease in the installation, operation, maintenance and safety manual for low voltage motors for explosive atmospheres delivered together with the motor, or see the lubrication plate on the motor.

Motors with bearings greased for life

Motors in frame sizes 80-132 are equipped with bearings greased for life, while this is available as an option for frame sizes 160-250. Bearings are lubricated with high-quality, high-temperature grease. Bearing types are stated on the rating plate. The approximate lifetime of bearings in four-pole motors is about 40 000 duty hours. Lifetime is subject to the load conditions of the application run by the motor.

Lubrication intervals in duty hours for ball bearings

450	95	70	-	-	2500	3900	7700	8700

Motors with re-lubrication nipples

In frame sizes 160-450, the bearing system is provided with valve discs to ease lubrication. Motors are lubricated while running. The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1-2 hours after re-greasing. This ensures that the construction is tight and bearings remain dust- and dirt-free.

A grease-collection method can be used optionally.

The following tables show lubrication intervals according to the L_1 principle for various nominal speeds in 25 °C ambient temperature. These values apply to horizontally mounted motors (B3) with 80 °C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Lubrication intervals in duty hours for roller bearings

Mechanical design

Radial forces

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Where:

D: pulley diameter, mm

P: power requirement, kW

n: motor speed, r/min.

K: belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5

F_R : permissible radial force, refer to tables below.

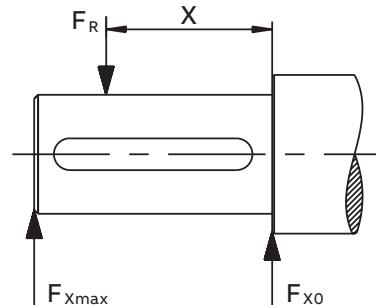

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force F_R can be calculated with the following formula:

$$F_R = F_{x0} - \frac{X}{E} (F_{x0} - F_{x\max})$$

Where:

E: length of the shaft extension in the standard version

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life L_{10h} of 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

Mechanical design

Axial forces

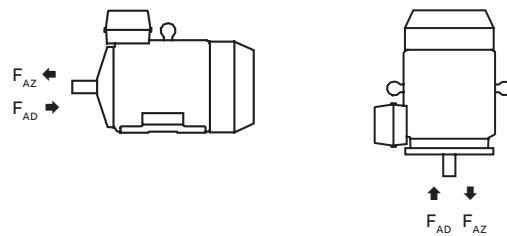

—
01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

Terminal box

Standard terminal box

Protection and mounting options

The degree of protection for the standard terminal box is IP 55. It complies with the requirements of the protection method 'eb' increased safety and prevents all ignition sources such as sparks, excessive over heating etc. The features of the terminal box are: No self loosening terminals, compliance with creepage and clearance distances as defined in standard for increased safety protection.

By default, terminal boxes are mounted on top of the motor at D-end. Side mounted terminal box is possible in frame sizes 160 and 180. Mounting at N-end is also possible for the larger frame sizes. Please refer to the variant code section for more details.

Turnability

The standard terminal boxes for motor sizes 80-250 can be turned 4*90° and in sizes 280-450 2*180° after delivery. For sizes 280-450 is also mounting of terminal box with opening towards D or N-end possible using the relevant variant codes when ordering.

Cable entries

Terminal box is provided as standard with tapped holes for cable glands, no cable glands are included as standard. The entry holes are closed with Ex eb approved blanking plugs made of nickel-plated brass, one of the main entries is closed with a plastic plug as transport and storage protection. Very large motors have an angle adapter between the terminal box and gland plate. Please refer to the table on next page for further information about amount and size of threaded holes, plugs provided as standard.

Different types of cable glands are available as option, suitable for either armoured and non-armoured cables, please refer to the Terminal box alternatives section for more details.

Cable type and terminations

Terminations are suitable for copper and aluminum cables (Al-cables on request for motor sizes 80 to 250). Cables are connected to terminals by cable lugs, which are not included in the delivery.

Earthing bolts

The motors are as standard provided with at least one earthing bolt inside the terminal box and another on the frame. The earthing bolt on the frame is located on top close to the terminal box for easy access from either side of the motor. As an option can also earthing bolts on the feet be provided, please refer to variant code section.

Ordering

To ensure the delivery of desired terminations and cable entries for the motor, state the cable type, quantity, size, outer diameter and possibly type of cable glands needed when ordering.

See section Variant codes for all options available.

Standard delivery

Standard delivery if no other information is provided. For other network voltages than voltage code D (see Ordering information section).

Terminal box

Terminal box alternatives

Optional cable termination parts

There is a broad selection of cable termination accessories available to allow a safe and reliable termination of one or several supply cables. The most common options are explained in this chapter.

How to order

- Check first that the terminal box itself allows mounting of the desired cable and cores (refer to table showing standard delivery for each motor size). If very large cable are used might it be necessary to use a larger terminal box and larger terminal board than standard
- Select the right cable gland(s) or cable sealing end unit based on the diameter of the cables(s) and suitability for cable type
- Select appropriate adapter or flange to allow mounting on opening in terminal box
- Note that turning the terminal box might be prevented by use of some adapters.

Optional adapters

To allow easy termination of cables entering the terminal box from above or below, is an angle adapter recommended. These are available for motor sizes 280 and above and can also be used to allow mounting of several cable sealing end units or gland plates. For exact suitability on a certain motor size, refer to the “size of gland plate opening on terminal box” column in section Standard terminal box column in section Standard terminal box.

Ordering example

Motor and supply cables	200kW, 4-pole, 400V 50Hz, IE2. Cables needed: 1 pcs outer diameter 42 mm steel wire armoured cable, single cross section 120 mm ² . Cables coming from below. Gland plate material steel.
Motor	M3KP 315MLA 2, B3
Adapter (to allow entry of cables coming from below)	Variant code 293 (adaptor D-D)
Cable glands Ex d suitable for armoured cables (an M50 gland will suit this cable)	Variant code 734 (specify cable dimensions)
Gland plate drilled and tapped with 1 pcs M50 hole (non-std size)	Variant code 554 (1 pcs M50 x 1.5 threaded hole to be specified)

Adapter

Threaded openings for cable glands with NPT thread (variant code 730)

The motors are delivered as standard with openings for cable glands with metric threads as listed in the section describing the standard terminal box. If glands with NPT threads will be used must variant code 730 be ordered. If nothing else is stated on the ordered will the sizes in tables below be delivered.

Motor frame size	Main cable entries	NPT plug
80-112	1 x $\frac{3}{4}$ "	-
132	2 x $\frac{3}{4}$ "	1 x $\frac{3}{4}$ "
160-180	2 x $1\frac{1}{4}$ "	1 x $1\frac{1}{4}$ "
200-250	2 x $1\frac{1}{2}$ "	1 x $1\frac{1}{2}$ "
280	2 x 2"	1 x 2"
315-450	2 x 3"	1 x 3"

Motor frame size	Cable entries for auxiliaries	NPT plug
80-112	2 x $\frac{3}{4}$ "	2 x $\frac{3}{4}$ "
132	1 x $\frac{3}{4}$ "	1 x $\frac{3}{4}$ "
160-450	2 x $\frac{3}{4}$ "	2 x $\frac{3}{4}$ "

Gland plates with threaded openings for cable glands of nonstandard size

If the standard size of threaded openings for cable glands does not suit the gland size and cable that will be used can openings of nonstandard size also be delivered, either by fitting a reducers to make the openings smaller or by increasing the amount or size of holes. The maximum possible size and amount for each gland plate size is listed below. Threaded openings of non-standard size can be ordered using variant codes 554 and 555.

Gland plate size	Maximum amount and size of threaded holes
B	2 x M40
C	2 x M63
D	2 x M90 or 3 x M75
E	2 x M90 or 4 x M75

Gland plates of non-standard material

The standard material used in gland plates is cast iron. Gland plates made of stainless steel are optional, either with cable glands or blind without threaded holes. Please refer to the variant code section for more information.

Cable sealing end units

As an alternative to gland plates and cable glands, cable sealing end units can be used. These allow more space for spreading the cores for easy termination. Cable sealing units have rubber sealed entries for one or two main cables. In addition there are two plugged M20 holes for auxiliary cables. The cable sealing end units are Ex e certified, as option can they be equipped with EMC modules or cable clamping devices by adding variant codes 704 or 231.

End unit	277	278	279
Suited for motor sizes	280	315, 355	315, 355
Opening to terminal box	C	D	D
Cable outer diameter	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 60 - 80 mm
Cable entry for auxiliary cable	2 x M20 plugged holes	2 x M20 plugged holes	2 x M20 plugged holes
Additional optional variants	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)

Auxiliary terminal box

It is possible to equip motors from frame size 132 upwards with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box is made of aluminum, except frame sizes 160, 180 where cast iron boxes are used.

Connection terminals are of spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. The auxiliary terminal boxes are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard.

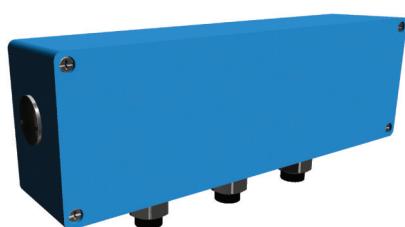

The standard cable entry is 2 x M20 with plugged entries. If cable glands are needed must these be ordered using the variant codes described earlier in this section.

Related variant codes

380	Separate terminal box for temperature detectors
418	Separate terminal box for auxiliaries
567	Separate terminal box material: cast Iron
568	Separate terminal box for heating elements

Small auxiliary aluminum terminal box for motor sizes 280-450 (variant codes 418, 568, 380, 569). The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 125 mm, max 12 strips. Earthing size M4.

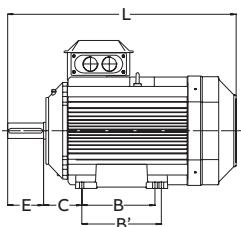

Large auxiliary aluminum terminal box for motor sizes 280-450. The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 250 mm, max 30 strips. Earthing size M4.

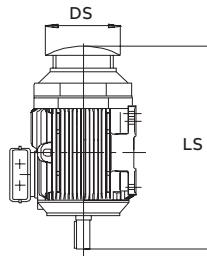

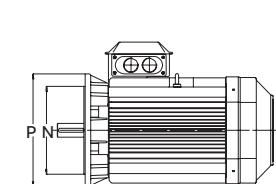

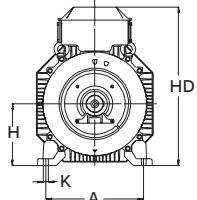

Auxiliary cast iron terminal box (variant code 567). 208 x 180 mm, max 30 strips. Earthing M6.

ABB

EU DECLARATION OF CONFORMITY

The Manufacturer: ABB Oy
Motors and Generators
P.O. Box 633
Strombergin Puistola 5A
FIN - 65101 Vasa, Finland

This declaration of conformity is issued under the sole responsibility of the manufacturer.

The products: 3-phase induction motors of series M3AA, M3DP, M3GP, M3HP, M3JP, M3JC, M3JM, M3KP markings as listed in those on the document's page 2...3 having correspondent name plate markings covered by those as listed.

The motors of the declaration described above are in conformity with the relevant Union harmonization legislation.

Directive 2014/34/EU
The following harmonized standards are applied in relation to which conformity is declared: EN 60079-0/A1-12019*, EN 60079-1-2014*, EN 60079-2-2007, EN 60079-7-2015*, EN 60079-15-2010, EN 60079-31-2014* and relevant parts of the harmonized standard -series of standards.

Directive 2009/125/EC (ErP) (Effective November 2009)
The motors are in conformity with the Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. Technical documentation based on the standard EN 60068-2-2012.

The conformity of the end product according to the Directive 2009/125/EC has to be established by the manufacturer.

Note: Motors have to be installed and maintained according to the relevant standards and instructions of ABB Oy, Motors and Generators. When installed in converter supplied applications, additional requirements must be respected regarding the motor as well as the installation as described in the appropriate dedicated addendum.

Notified Bodies (EN): LCIE (0081), Av. Du Général Leclerc, 33, 92266 Fontenay-aux-Roses, France and VTT Expert Services Ltd (0637), Otakaari 7B, 02044 Espoo, Finland

Signed for and on behalf of: ABB Oy, Motors and Generators and ABB Sp.z.o.o.

Place and date of issue: Vasa, Finland, 2017-03-27

7 Cet appareil ou système de protection et ses variantes éventuelles acceptées sont décris dans l'annexe de la présente attestation et dans les documents mentionnés en référence.

8 Le LCIE, certifie que le système de protection, en vertu de l'annexe 9 de la directive 94/9/EG du parlement européen et du conseil du 23 mars 1994, certifie que cet appareil ou système de protection est conforme aux exigences essentielles de sécurité et de santé publique fixées par la directive, en ce qui concerne la conception et la construction d'appareils et de systèmes de protection destinés à être utilisés dans les atmosphères explosives, données dans l'annexe II de la directive. Les résultats des vérifications et essais figurant dans le rapport technique sont en accord avec cette directive.

9 Le respect des exigences essentielles de sécurité et de santé est assuré par la conformité à:
- EN 60079-0 (2009) - EN 60079-31 (2009)
- EN 60079-1 (2007) - EN 60079-7 (2007)

10 La signature X lorsqu'il est placé à la suite du numéro de modèle indique que cet appareil ou système de protection est soumis à une surveillance de l'application du système de protection. Ces dernières ne sont pas couvertes par la présente attestation.

11 Cette attestation d'examen CE de type concerne uniquement la conception et la construction de l'appareil ou du système de protection spécifique, conformément à l'annexe III de la directive 94/9/EG. Des exigences supplémentaires de la directive sont applicables au processus de fabrication de l'appareil ou du système de protection. Ces dernières ne sont pas couvertes par la présente attestation.

12 La marquage de l'appareil ou du système de protection doit comporter les informations suivantes au point 11:

Fontenay Aux Roses

Rémi HANOT

Motors in brief

Flameproof motors Ex db eb, sizes 80 to 180

Motor size		80	90	100	112	132	160	180		
Stator	Material	Cast iron, EN-GJL-200 or better								
	Paint color shade	Blue, Munsell 8B 4.5/3.25								
	Corrosion class	C3 medium according to ISO/EN 12944-5								
Feet	Forged steel, detachable feet									
Bearing end shields	Material	Cast iron, EN-GJL-200 or better								
	Paint colour shade	Blue, Munsell 8B 4.5/3.25								
	Paint colour shade	C3 medium according to ISO/EN 12944-5								
Bearings	D-end 2-12 poles	6205-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C	6208-2Z/C3	6309/C3	6310/C3		
	N-end 2-12 poles	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309/C3	6310/C3		
Axially locked bearings	Inner bearing cover	As standard, locked at D-end								
Bearing seals	Gamma ring									
Lubrication	Permanent grease lubrication									
SPM nippleas	-									
Rating plate	Material	Stainless steel								
Terminal box	Frame material	Cast iron, EN-GJL-200 or better								
	Cover material	Cast iron, EN-GJL-200 or better								
	Cover screws material	Acidproof steel A4-80								
Connections	Cable entries	1 x M25 + 1 x M20 plugged	2 x M32 + 1 x M20 plugged							
	Terminals	6 terminals for connection with cable lugs (not included)								
Fan	Material	Polyamide. Reinforced with glass fibre.								
Fan cover	Material	Steel	Hot dip galvanized steel							
	Paint color shade	Munsell blue 8B 4.5/3.25								
	Corrosion class	C3 medium according to ISO/EN 12944-5								
Stator winding	Material	Copper								
	Insulation	Insulation class F								
	Winding protection	3 pcs thermistors as standard								
Rotor winding	Material	Pressure die-cast aluminum								
Balancing	Half-key balancing as standard									
Keyway	Closed keyway									
Drain holes	-									
External earthing bolt	As standard									
Enclosure	IP 55									
Cooling method	IC 411									
Optional										

Motors in brief

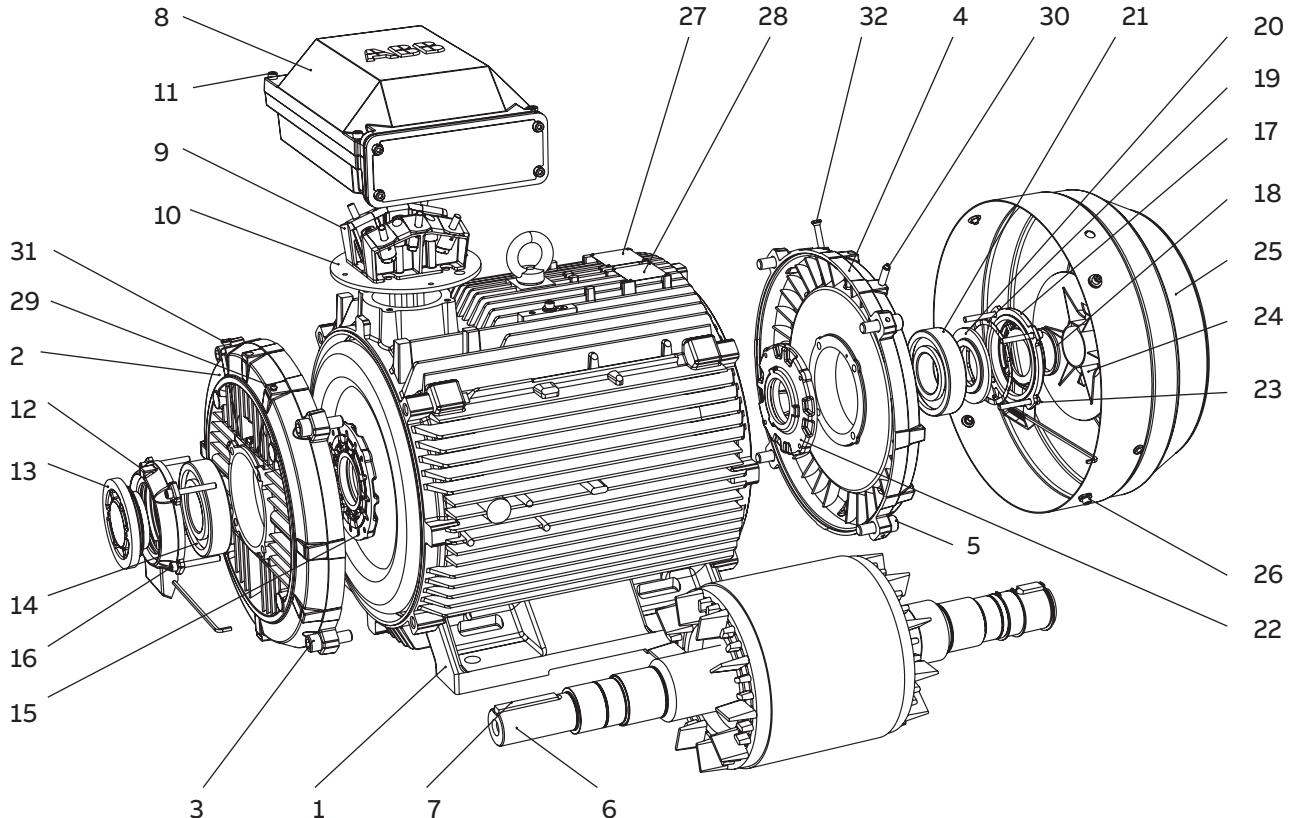

Flameproof motors Ex db eb, sizes 200 to 450

Motor size		200	225	250	280	315	355	400	450
Stator	Material	Cast iron, EN-GJL-200 or better							
	Paint color shade	Munsell blue 8B 4.5/3.25							
	Corrosion class	C3 medium according to ISO/EN 12944-5							
Feet	Material	Cast iron, EN-GJL-200 or better, integrated with stator							
Bearing end shields	Material	Cast iron, EN-GJL-200 or better							
	Paint colour shade	Blue, Munsell 8B 4.5/3.25							
	Corrosion class	C3 medium according to ISO/EN 12944-5							
Bearings	D-end	2-pole	6312M/C3	6313M/C3	6315M/C3	6316/C3	6316/C3	6316M/C3	6317M/C3 -
		4-12-pole	6312/C3	6313/C3	6315/C3	6316/C3	6319/C3	6322/C3	6324/C3 6326M/C3

Rating plates

—
01 Motor sizes 80 to 400.

The rating plates are in table form giving values for speed, current and power factor for one voltage: 400 V as standard. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

The following information will be shown on the motor rating plate:

- Lowest nominal efficiency at 100 %, 75 % and 50 % rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number of the certification body
- Certificate number: ATEX
- Relative short circuit current I_A/I_N
- Locked rotor time t_E

¹⁾-3dB(A) sound pressure level reduction with unidirectional fan construction. Direction of rotation must be stated when ordering, see variant codes 044 and 045.

²⁾Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045.

Variant codes

Increased safety motors Ex eb IIC T3 Gb

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Code/Variants	Frame size												
	80	90	100	112	132	160	180	200	225	250	280	315	355
Administration													
529 Customer witnessed visual inspection of complete order line.	•	•	•	•	•	•	•	•	•	•	•	•	•
530 Two-year extension on standard warranty	•	•	•	•	•	•	•	•	•	•	•	•	•

○ = Included as standard | ● = Available as option | - = Not applicable

Mechanical design

Motor frame and drain holes

Motor frame

The motor frame, end shields and main terminal box are made of cast iron. Motors in frame size 200 and larger have integrated feet for rigid and vibration free mounting, motors in frame size 80-180 have detachable feet made of forged steel for maximum flexibility and rigidity.

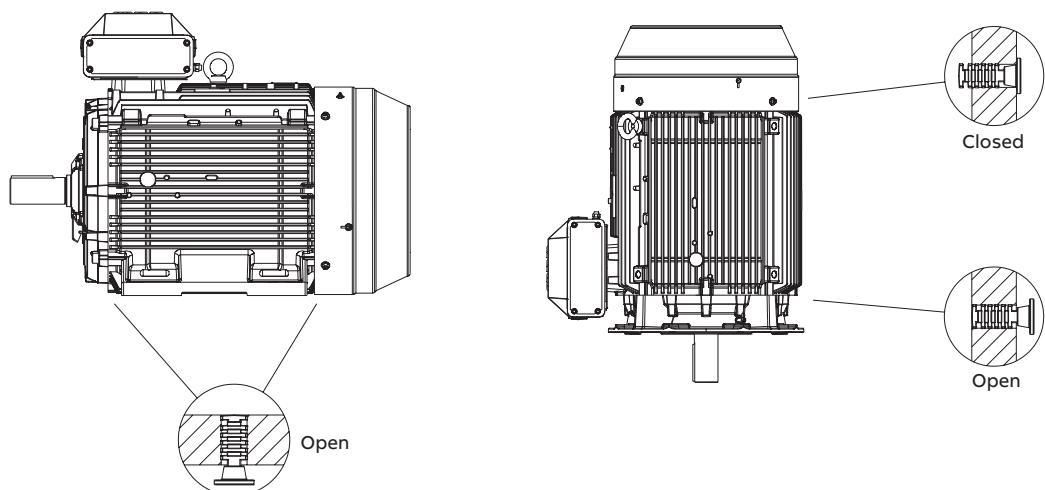

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Increased safety motors in frame size 200-400 are provided with drain holes fitted with plugs as standard. The plugs are made of plastic material and delivered in open position. Drain holes and plugs are available for frame size 80 to 180 as an option, please refer to variant code section.

It's recommended that motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes with plugs to ensure that water possibly condensed inside the enclosure can easily be drained.

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

Lifting lugs

The motors are provided as standard with lifting lugs according to table below. For improved lifting possibilities can variant code 305 be added, please refer to the variant code section for information about availability.

Frame size	Type of lugs	Foot mounted motors	Flange mounted motors
80	Detachable lifting eye	1 pcs close to terminal box	1 pcs close to terminal box
90-112	Integrated in casting	2 pcs close to terminal box on top	2 pcs close to terminal box
132	Integrated in casting	2 pcs on top of motor diagonally placed, integrated in frame casting	2 pcs on top of motor diagonally placed, integrated in frame casting
160	Detachable eye bolt	Several mounting locations for lugs on the frame, 2 pcs M12 delivered with each motor	Several mounting locations for lugs on the frame, 2 pcs M12 delivered with each motor
180	Detachable eye bolt	Several mounting locations for lugs on the frame, 2 pcs M16 delivered with each motor	Several mounting locations for lugs on the frame, 2 pcs M16 delivered with each motor
225-250	Integrated in casting	2 pcs on top of motor diagonally placed	2 pcs at N-end, 2 pcs at D-end diagonally placed
280, 315	Detachable eye bolt	1 pcs close to terminal box on top, size M24	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M24 delivered with each motor
355	Detachable eye bolt	1 pcs close to terminal box on top, size M30	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M30 delivered with each motor
400	Detachable eye bolt	1 pcs close to terminal box on top, size M36	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M36 delivered with each motor

Mechanical design

Heating elements

Heating elements are installed on stator winding coil heads to keep the winding dry and free of corrosion in humid conditions. The power of the heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motor size	80	90	100	112	132	160	180
Power (W)	25	25	25	25	25	25	25

Motor size	200	225	250	280	315	355	400
Power (W)	25	60	60	60	2x60	2x60	2x60

Motors for marine applications mounted on open deck may have heating element powers differing from the ones shown in this table.

Mechanical design

Bearings

ABB's increased safety motors are normally fitted with single-row deep-groove grease lubricated ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037.

Locking may also be fitted in other cases if severe transport conditions are expected.

When high axial forces are involved, angular-contact ball bearings should be used. When ordering a motor with an angular-contact ball bearing, specify also the method of mounting and the direction and magnitude of axial force to ensure that optimal bearing system design is chosen. The variant codes for ordering angular-contact ball bearings at D-end are 058 and 060.

Standard and alternative designs

¹⁾ On request

Axially-locked bearings

All motors with deep groove ball bearings are equipped as standard with an axially locked bearing at the D-end.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before dispatch to prevent damage to bearings during transport. A warning label is attached to motors when transport locking is used.

Bearing seals

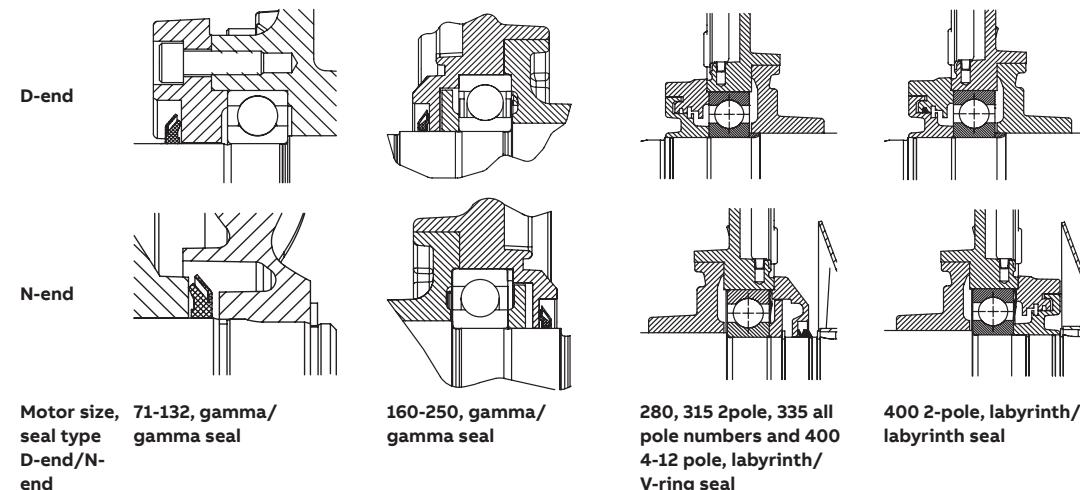

Table below present the standard and alternative and types of bearing seals per motor size.

Bearing seals

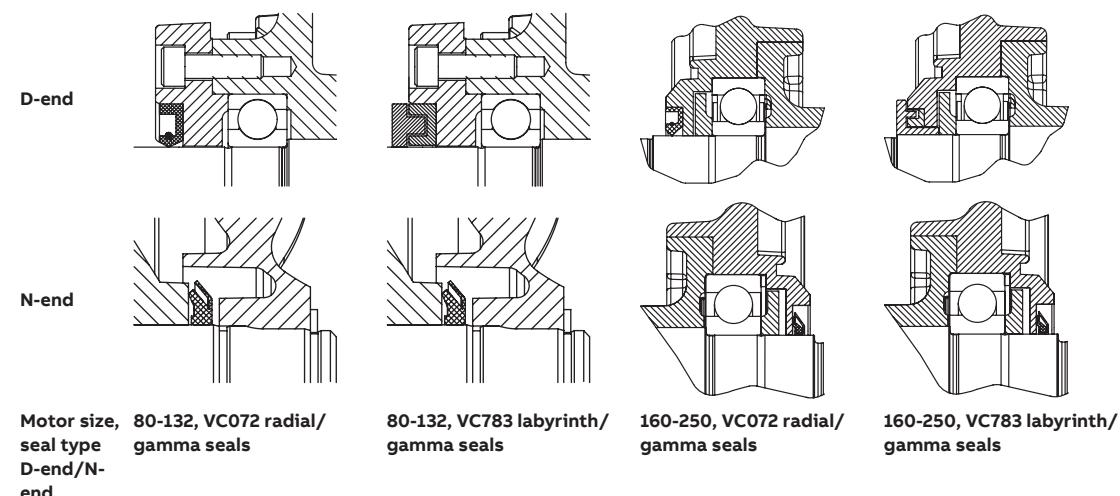

Motor size	Number of poles	Standard design		Alternative design	
		D-end	N-end	Radial seal at D-end (variant code 072) ¹⁾	Labyrinth seal at D-end (variant code 783) ¹⁾

¹⁾ N-end bearing seal of standard design, special N-end bearing seal arrangements on request

Standard design

Alternative design

Bearing life and lubrication

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes up to 315 $\geq 100,000$ hours.

Lubrication

On delivery, motors in frame size 160 and above are pre-lubricated with high-quality grease. Before first start-up, see instructions for re-lubrication and recommended grease in the installation, operation, maintenance and safety manual for low voltage motors for explosive atmospheres delivered together with the motor, or see the lubrication plate on the motor.

Motors with bearings greased for life

Motors in frame sizes 71-132 are equipped with bearings greased for life, while this is available as an option for frame sizes 160-250. Bearings are lubricated with high-quality, high-temperature grease. Bearing types are stated on the rating plate.

The approximate lifetime of bearings in four-pole motors is about 40 000 duty hours. Lifetime is subject to the load conditions of the application run by the motor.

Lubrication intervals in duty hours for ball bearings

Frame size	Amount of grease g/bearing	Amount of grease g/N-end	Speed 3600 r/min	Speed 3000 r/min	Speed 1800 r/min	Speed 1500 r/min	Speed 1000 r/min	Speed 500-900 r/min

Motors with re-lubrication nipples

In frame sizes 160-400, the bearing system is provided with valve discs to ease lubrication. Motors are lubricated while running. The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1-2 hours after re-greasing. This ensures that the construction is tight and bearings remain dust- and dirt-free.

A grease-collection method can be used optionally.

The following tables show lubrication intervals according to the L_1 principle for various nominal speeds in 25 °C ambient temperature. These values apply to horizontally mounted motors (B3) with 80 °C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Mechanical design

Radial forces

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Where:

D: pulley diameter, mm

P: power requirement, kW

n: motor speed, r/min.

K: belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5

F_R: permissible radial force, refer to tables below.

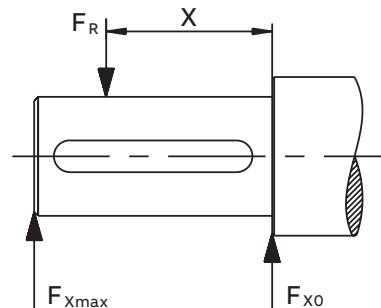

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft together with flame path dimensions affects permissible forces.

If the radial force is applied between points X0 and X_{max}, the permissible force F_R can be calculated with the following formula:

$$F_R = F_{x0} - \frac{X}{E} (F_{x0} - F_{x_{max}})$$

Where:

E: length of the shaft extension in the standard version

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life L_{10h} of 40 000 hours per motor size.

Permissible loads of simultaneous radial and axial forces can be supplied on request.

Mechanical design

Axial forces

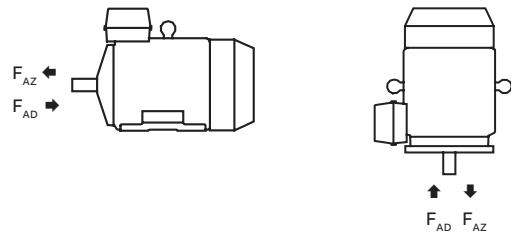

—
01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

Terminal box

Standard terminal box

Protection and mounting options

The degree of protection for the standard terminal box is IP 55. It complies with the requirements of the protection method 'eb' increased safety and prevents all ignition sources such as sparks, excessive over heating etc. The features of the terminal box are: No self loosening terminals, compliance with creepage and clearance distances as defined in standard for increased safety protection.

By default, terminal boxes are mounted on top of the motor at D-end. Side mounted terminal box is possible in frame sizes 160 and above. Mounting at N-end is also possible for the larger frame sizes. Please refer to the variant code section for more details.

Turnability

The standard terminal boxes for motor sizes 80-250 can be turned 4*90° and in sizes 280-400 2*180° after delivery. For sizes 280-400 is also mounting of terminal box with opening towards D or N-end possible using the relevant variant codes when ordering.

Cable entries

Terminal box is provided as standard with tapped holes for cable glands, no cable glands are included as standard. The entry holes are closed with Ex eb approved blanking plugs made of nickel-plated brass, one of the main entries is closed with a plastic plug as transport and storage protection. Very large motors have an angle adapter between the terminal box and gland plate. Please refer to the table on next page for further information about amount and size of threaded holes, plugs provided as standard.

Different types of cable glands are available as option, suitable for either armoured and non-armoured cables, please refer to the Terminal box alternatives section for more details.

Cable type and terminations

Terminations are suitable for copper and aluminum cables (Al-cables on request for motor sizes 80 to 250). Cables are connected to terminals by cable lugs, which are not included in the delivery.

Earthing bolts

The motors are as standard provided with at least one earthing bolt inside the terminal box and another on the frame. The earthing bolt on the frame is located on top close to the terminal box for easy access from either side of the motor. As an option can also earthing bolts on the feet be provided, please refer to variant code section.

Ordering

To ensure the delivery of desired terminations and cable entries for the motor, state the cable type, quantity, size, outer diameter and possibly type of cable glands needed when ordering.

See section Variant codes for all options available.

Standard delivery

Standard delivery if no other information is provided.

Terminal box

Terminal box alternatives

Optional cable termination parts

There is a broad selection of cable termination accessories available to allow a safe and reliable termination of one or several supply cables. The most common options are explained in this chapter.

How to order

- Check first that the terminal box itself allows mounting of the desired cable and cores (refer to table showing standard delivery for each motor size). If very large cable are used might it be necessary to use a larger terminal box and larger terminal board than standard
- Select the right cable gland(s) or cable sealing end unit based on the diameter of the cables(s) and suitability for cable type
- Select appropriate adapter or flange to allow mounting on opening in terminal box
- Note that turning the terminal box might be prevented by use of some adapters.

Optional adapters

To allow easy termination of cables entering the terminal box from above or below, is an angle adapter recommended. These are available for motor sizes 280 and above and can also be used to allow mounting of several cable sealing end units or gland plates. For exact suitability on a certain motor size, refer to the “size of gland plate opening on terminal box” column in section Standard terminal box.column in section Standard terminal box.

Ordering example

Motor and supply cables	145kW, 4-pole, 400V 50Hz, IE2. Cables needed: 1 pcs outer diameter 42 mm steel wire armoured cable, single cross section 120 mm ² . Cables coming from below. Gland plate material steel.
Motor	M3HP 315MLA 4, B3
Adapter (to allow entry of cables coming from below)	Variant code 293 (adaptor D-D)
Cable glands Ex d / Ex e suitable for armoured cables (an M50 gland will suit this cable)	Variant code 734 (specify cable dimensions)
Gland plate drilled and tapped with 1 pcs M50 hole (non-std size)	Variant code 554 (1 pcs M50 x 1.5 threaded hole to be specified)

Adapter

Variant code	292	293	294	295
Suited for motor sizes	280	315, 355	355 - 400	355 - 400
Opening to terminal box	C	D	E	E
Flange or opening for end unit	C	D	D	2 x D
Material	Cast iron	Cast iron	Steel	Steel
Notes	Included in standard delivery for frame size 400 and 355ML, LK 2-4 pole.			

Cable glands

The motors are delivered as standard with plugged cable entries as described in the previous section. There is a broad selection of different type of cable glands available which are suitable for different types of cable and outer diameter ranges.

Size of threaded opening for cable gland	Cable gland(s) nickel plated brass, Ex e, for non armoured cable, variant code 230 or 731	EMC Cable gland(s) nickel plated brass, Ex e, for non armoured cable, variant code 704	Cable gland Ex d IIC / Ex e for armoured cable with double sealing, variant code 734
Metric (std)	Cable outer diameter, mm	Cable outer diameter, mm	Cable outer diameter, mm Inner sheath diameter, mm
M16 x 1.5	4-8	4-8	7-12 4.5-8

M90 x 1.5	-	-	78-90 68-80
M100 x 1.5	-	-	88-100 78-90

*) = High capacity version, delivered as standard with the variant code

Threaded openings for cable glands with NPT thread (variant code 730)

The motors are delivered as standard with openings for cable glands with metric threads as listed in the section describing the standard terminal box. If glands with NPT threads will be used must variant code 730 be ordered. If nothing else is stated on the ordered will the sizes in tables below be delivered.

Motor frame size	Main cable entries	NPT plug
80-112	1 x 3/4"	-
132	2 x 3/4"	1 x 3/4"
160-180	2 x 1 1/4"	1 x 1 1/4"
200-250	2 x 1 1/2"	1 x 1 1/2"
280	2 x 2"	1 x 2"
315-450	2 x 3"	1 x 3"

Motor frame size	Cable entries for auxiliaries	NPT plug
80-112	2 x 3/4"	2 x 3/4"
132	1 x 3/4"	1 x 3/4"
160-450	2 x 3/4"	2 x 3/4"

Gland plates with threaded openings for cable glands of nonstandard size

If the standard size of threaded openings for cable glands does not suit the gland size and cable that will be used can openings of nonstandard size also be delivered, either by fitting a reducers to make the openings smaller or by increasing the amount or size of holes. The maximum possible size and amount for each gland plate size is listed below. Threaded openings of non-standard size can be ordered using variant codes 554 and 555.

Gland plate size	Maximum amount and size of threaded holes
B	2 x M40
C	2 x M63
D	2 x M90 or 3 x M75
E	2 x M90 or 4 x M75

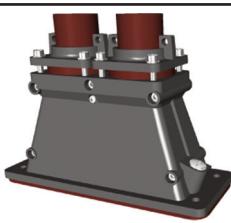

Gland plates of non-standard material

The standard material used in gland plates is cast iron. Gland plates made of stainless steel are optional, either with cable glands or blind without threaded holes. Please refer to the variant code section for more information.

Cable sealing end units

As an alternative to gland plates and cable glands, cable sealing end units can be used. These allow more space for spreading the cores for easy termination. Cable sealing units have rubber sealed entries for one or two main cables. In addition there are two plugged M20 holes for auxiliary cables. The cable sealing end units are Ex e certified, as option can they be equipped with EMC modules or cable clamping devices by adding variant codes 704 or 231.

End unit

Variant code	277	278	279
Suited for motor sizes	280	315, 355	315, 355
Opening to terminal box	C	D	D
Cable outer diameter	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 60 - 80 mm
Cable entry for auxiliary cable	2 x M20 plugged holes	2 x M20 plugged holes	2 x M20 plugged holes
Additional optional variants	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)

Auxiliary terminal box

It is possible to equip motors from frame size 160 upwards with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box is made of aluminum, except frame sizes 160, 180 where cast iron boxes are used.

Connection terminals are of spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. The auxiliary terminal boxes are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard.

The standard cable entry is 2 x M20 with plugged entries. If cable glands are needed must these be ordered using the variant codes described earlier in this section.

Related variant codes

380	Separate terminal box for temperature detectors
418	Separate terminal box for auxiliaries
567	Separate terminal box material: cast Iron
568	Separate terminal box for heating elements

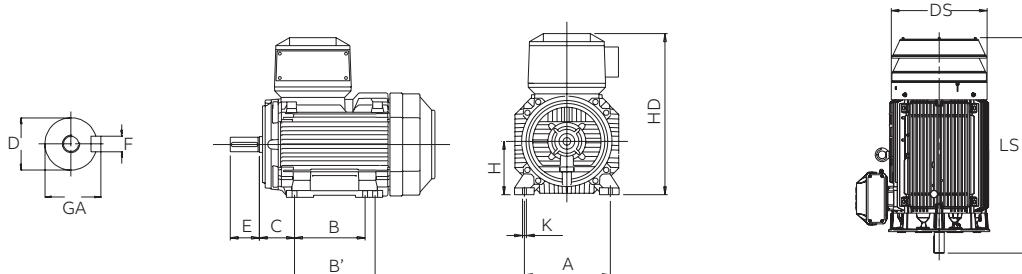

Small auxiliary aluminum terminal box for motor sizes 280-450 (variant codes 418, 568, 380, 569). The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 125 mm, max 12 strips. Earthing size M4

Large auxiliary aluminum terminal box for motor sizes 280-450. The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 250 mm, max 30 strips. Earthing size M4

Auxiliary cast iron terminal box (variant code 567). 208 x 180 mm, max 30 strips. Earthing M6

01 EU Declaration of Conformity

ABB

EU DECLARATION OF CONFORMITY

The Manufacturer:

ABB Oy
Motors and Generators
P.O. Box 630
Sotkamo Postilaute 5A
FIN - 65101 Vaasa, Finland

ABB Sp.z.o.o.
27 Place Zwicky Str.
PL-95-070 Olecko-Lodzki
Poland

This declaration of conformity is issued under the sole responsibility of the manufacturer.

The products: 3-phase induction motors of series M3AA, M3DP, M3GP, M3JP, M3JC, M3JM, M3KP and M3K as listed in this document on the pages 2...3 having correspondent name plate marking covered by those as listed.

The motors of the declaration described above are in conformity with the relevant Union harmonization legislation.

Directive 2011/65/EU

The following harmonized standards are applied to that by conformity is declared: EN 60079-0/A11/2013⁹, EN 60079-1/2014⁹, EN 60079-7/2007, EN 60079-7/2015⁹, EN 60079-15/2010, EN 60079-31/2014⁹ and parts of the EN 60034-30:standards.

Directive 2009/125/EC (ERP - 20 December 2009)

The minimum energy requirements of 13) of 40 are in conformity with the requirements set in the Commission Regulation (EU) No 2014/6 of 5 January 2014 amending Regulation (EC) No. 640/2009. Efficiency classes as defined in the standard EN 60034-30:2005.

Directive 2011/65/EU

Motors are in conformity with the Directive 2011/65/EU of the European Parliament and of the Council of 8 July 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. Technical documentation based on the standard EN 60012/2012.

The conformity of the end product according to the Directive 2006/42/EC has to be established by the commissioning party when the motor is fitted to the machinery.

Notes: Motors have to be installed and used according to the relevant standards and instructions of ABB Oy, M3GP, M3JP, M3JC, M3JM, M3KP. Wherever installed in customer supplied applications, additional requirements must be respected regarding the motor as well as the installation as described in the appropriate dedicated addendum.

 <p>L C I E</p> <p>1 ATTESTATION D'EXAMEN CE DE TYPE</p> <p>Appareil ou système de protection : Moteur asynchrone Type : M8B1PIB5A (Solenoid H)</p> <p>Demandeur : ABB Oy Motors Adresse : Stromberg Puistola 5A FIN - 65101 VAASA - Finland</p> <p>Fabricant : ABB Oy Motors Adresse : Stromberg Puistola 5A FIN - 65101 VAASA - Finland</p> <p>Cet attestation couvre les systèmes de protection et des variateurs d'essieu pour moteurs asynchrones destinés à l'application de la présente attestation et dans les documents décrits ci-dessous en référence.</p> <p>8 La L.C.I.E. organisme notifié sous la référence 0081 confirme par l'avisé le 9 de la directive 94/9/CE du Parlement européen et du Conseil du 23 mars 1994, certifie que l'appareil ou système de protection répond aux exigences essentielles de sécurité et de santé pour la conception et la construction d'appareils et de systèmes de protection contre les risques d'explosion et d'atmosphères explosives, données dans l'annexe II de la directive. Les résultats de l'essai sont établis et figurent dans le rapport technique N° 91307-552000.</p> <p>9 Les respectives exigences essentielles de sécurité et de santé sont assurées par la conformité à : - EN 60079-0 (2002) + A11 (2007) - EN 61241-0 (2006) - EN 61241-1 (2004)</p> <p>10 Le signe X lorsqu'il est placé à la suite du numéro de l'annexe II de la directive indique que l'appareil ou système de protection est soumis aux conditions spéciales pour une utilisation sûre, mentionnées dans l'annexe II de la présente attestation.</p> <p>11 Cette attestation d'ce type certifie concrètement la conception et la construction de l'appareil ou du système de protection, conformément à l'annexe III de la directive 94/9/CE. Des exigences supplémentaires de la directive sont appliquées au niveau local et le cas échéant au niveau du système de protection. Ces dernières ne sont pas comprises par la présente attestation.</p> <p>12 La norme de certification pour ce système de protection doit comporter les informations détaillées au point 15.</p> <p>Fontenay-aux-Roses, le 9 avril 2009</p> <p style="text-align: right;"><i>[Signature]</i> Responsable de certification ATEX ATEX certification manager</p>	 <p>1 EC TYPE EXAMINATION CERTIFICATE</p> <p>2 Equipment or protective system intended for use in atmospheres containing explosive substances (Directive 94/9/EC)</p> <p>3 EC type examination certificate number LCIE 09 ATEX 3023</p> <p>4 Equipment or protective system : Asynchronous motor Type : M8B1PIB5A (Solenoid H)</p> <p>5 Applicant : ABB Oy Motors Address : Stromberg Puistola 5A FIN - 65101 VAASA - Finland</p> <p>6 Manufacturer : ABB Oy Motors Address : Stromberg Puistola 5A FIN - 65101 VAASA - Finland</p> <p>7 The equipment or protective system and any acceptable variation thereof is certified in accordance with schedule to this certificate and the documents therein referred to.</p> <p>8 LCIE, notified body number 0081 in accordance with article 9 of the Directive 94/9/EC of the European Parliament and the Council of 23 March 1994, certifies that this equipment or protective system complies with the essential health and safety requirements relating to the design and construction of equipment and protective systems for use in atmospheres potentially explosive atmospheres, given in Annex II to the Directive. The examination and test results are recorded in confidential report N° 91307-552000.</p> <p>9 Compliance with the Essential Health and Safety Requirements has been assured by compliance with: - EN 60079-0 (2002) + A11 (2007) - EN 61241-0 (2006) - EN 61241-1 (2004)</p> <p>If the sign X is placed after the article number, it indicates that the equipment protects a specific use or special conditions for safe use specified in the schedule to this certificate.</p> <p>11 This EC type examination certificate relates only to the design and construction of this specified equipment or protective system in accordance with annex III to the directive 94/9/EC. Further requirements of the directive apply to the equipment or protective system if it is used for other purposes than those specified in the schedule to this certificate. These are not covered by this certificate.</p> <p>12 The marking of the equipment or protective system shall include information as detailed at 15.</p> <p style="text-align: right;">Marc GILLIAUX</p>

Motors in brief

Increased safety Ex eb cast iron motors, size 80 to 180

Motor size		80	90	100	112	132	160	180
Stator and end shields	Material	Cast iron, EN-GJL-200 or better						
	Paint color shade	Blue, Munsell 8B 4.5/3.25						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Feet		Forged steel, detachable feet						
Bearing end shields	Material	Cast iron, EN-GJL-200 or better						
	Paint colour shade	Blue, Munsell 8B 4.5/3.25						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Bearings	D-end 2-12 poles	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C	6208-2Z/C3	6309/C3	6310/C3
	N-end 2-12 poles	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3	6208-2Z/C3	6309/C3	6310/C3
Axially locked bearings	Inner bearing cover	As standard, locked at D-end						
Bearing seals	D-end	Gamma ring						
Lubrication		Permanent grease lubrication				Regreasable bearings		
SPM nippleas		-				As standard		
Rating plate	Material	Stainless steel						
Terminal box	Frame material	Cast iron, EN-GJL-200 or better						
	Cover material	Cast iron, EN-GJL-200 or better						
	Cover screws material	Acidproof steel A4-80				Steel 8.8, zinc electroplated and chromated.		
Connections	Cable entries	1 x M25 + 1 x M20 plugged	2 x M32 + 1 x M20 plugged				2 x M40 + 2 x 20 plugged	
	Terminals	6 terminals for connection with cable lugs (not included)						
Fan	Material	Polyamide. Reinforced with glass fibre.				Polypropylene. Reinforced with glass fibre.		
Fan cover	Material	Steel			Hot dip galvanized steel			
	Paint color shade	Munsell blue 8B 4.5/3.25						
	Corrosion class	C3 medium according to ISO/EN 12944-5						
Stator winding	Material	Copper						
	Insulation	Insulation class F.						
	Winding protection	3 pcs thermistors as standard						
Rotor winding	Material	Pressure die-cast aluminum						
Balancing method		Half-key balancing as standard						
Keyway		Closed keyway						
Heating elements	On request	25 W						
Drain holes		-				Optional		
External earthing bolt		As standard						
Enclosure		IP 55						
Cooling method		IC 411						

Motors in brief

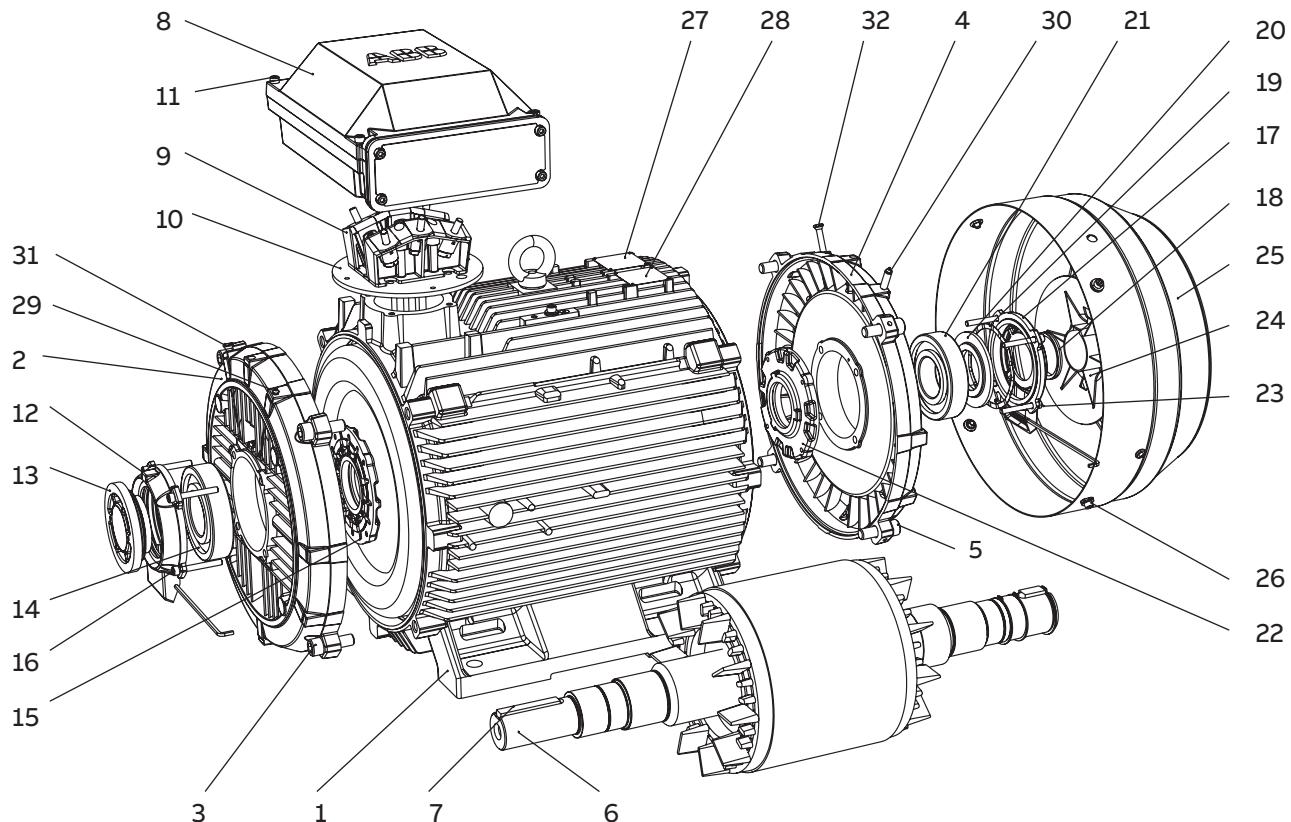

Increased safety Ex eb cast iron motors, sizes 200 to 400

Motor size		200	225	250	280	315	355	400	
Stator	Material	Cast iron, EN-GJL-200 or better							
	Paint color shade	Munsell blue 8B 4.5/3.25							
	Corrosion class	C3 medium according to ISO/EN 12944-5							
Feet	Material	Cast iron, EN-GJL-200 or better, integrated with stator							
Bearing end shields	Material	Cast iron, EN-GJL-200 or better							
	Paint colour shade	Blue, Munsell 8B 4.5/3.25							
	Corrosion class	C3 medium according to ISO/EN 12944-5							
Bearings	D-end	2-pole	6312M/C3	6313M/C3	6315M/C3	6316/C3	6316/C3	6316M/C3	6317M/C3
		4-12-pole	6312/C3	6313/C3	6315/C3	6316/C3	6319/C3	6322/C3	6324/C3
	N-end	2-pole	6310M/C3	6312M/C3	6313M/C3	6316/C3	6316/C3	6316M/C3	6317M/C3
		4-12-pole	6310/C3	6312/C3	6313/C3	6316/C3	6316/C3	6313/C3	6319/C3
Axially locked bearings	Inner bearing cover	As standard, locked at D-end							
Bearing seals		Gamma ring			V-ring or labyrinth seal. Refer to table on page 84.				
Lubrication		Regreasable bearings							
SPM nipples		As standard							
Rating plate	Material	Stainless steel							
Terminal box	Frame material	Cast iron, EN-GJL-200 or better							
	Cover material	Cast iron, EN-GJL-200 or better							
	Cover screws material	Steel 8.8, zinc electroplated and chromated							
Connections	Cable-entries	2 x M40 + 2 x M20 plugged			2 x M63 + 2 x M20 plugged		Refer to table on page 126.		
	Terminals	6 terminals for connection with cable lugs (not included)							
Fan	Material	Polypropylene. Reinforced with glass fibre.					Polypropylene reinforced with glass fibre or aluminum.		
Fan cover	Material	Hot dip galvanized steel							
	Paint color shade	Munsell blue 8B 4.5/3.25							
	Corrosion class	C3 medium according to ISO/EN 12944-5							
Stator winding	Material	Copper							
	Insulation	Insulation class F							
	Winding protection	3 pcs thermistors as standard							
Rotor winding	Material	Pressure die-cast aluminum							
Balancing		Half key balancing							
Heating elements	On request	25 W	60 W			120 W			
Keyway		Closed			Open				
Drain holes		As standard, open on delivery							
External earthing bolt		As standard							
Enclosure		IP 55							
Cooling method		IC 411

Rating plates

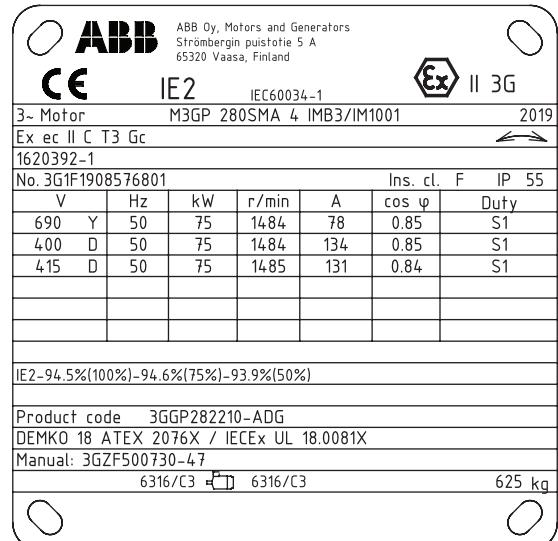

—
01 Motor sizes 71 to 132.

02 Motor sizes 160 to 400.

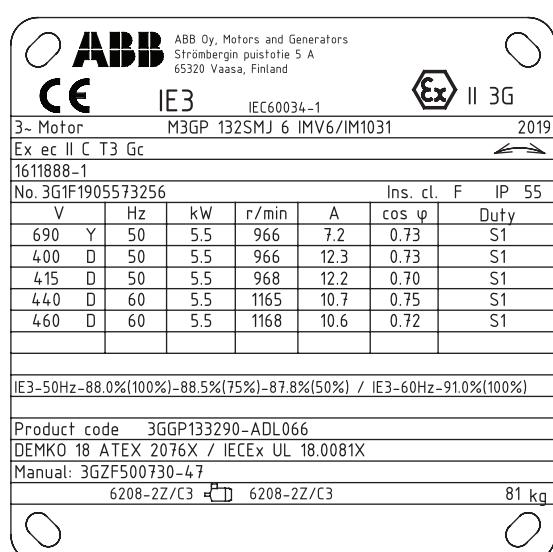

The rating plates are in table form giving values for speed, current and power factor for cast iron motor: 400V Hz and 230V or 690V depending on voltage code. For motors in size 71-132 is also data for 460V 60Hz included. Motors in size 160 and above have data for 415V 50Hz. For aluminum motors there are one or two voltages in use: 230V - 400V depending on frame size. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209. Please see Variant code section.

The following information will be shown on the motor rating plate:

- Lowest nominal efficiency at 100 %, 75 % and 50 % rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Certificate number: ATEX and IECEx

Variant codes

Increased safety cast iron motors Ex ec IIC T3 Gc

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

○ = Included as standard | ● = Available as option | - = Not applicable

Mechanical design

Motor frame and drain holes

Motor frame

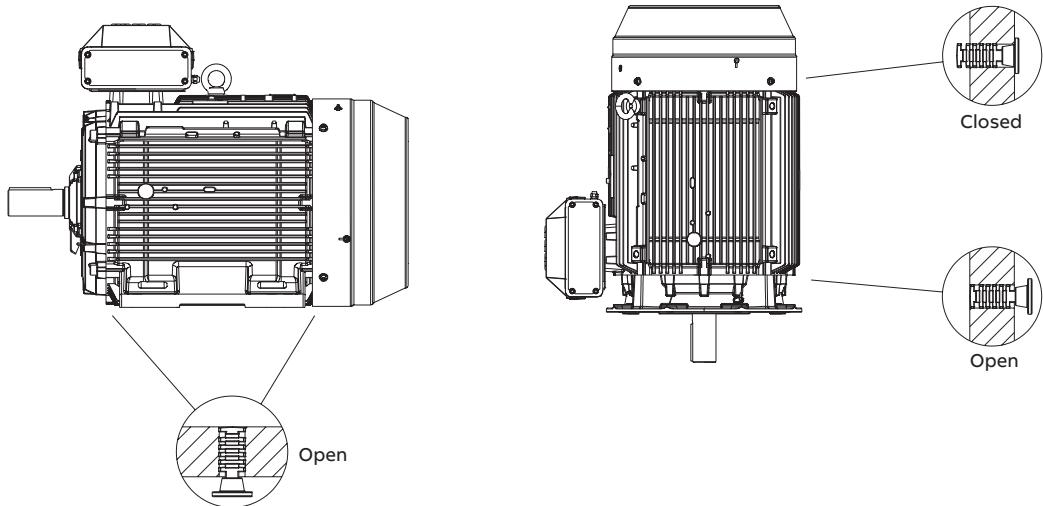

The motor frame, end shields and main terminal box are made of cast iron. Feet are integrated with the frame, except for sizes 160-250 with side mounted terminal box, which have detachable feet.

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Increased safety Ex ec motors are provided with drain holes fitted with closable plugs as standard. The plugs are made of plastic material and are delivered in open position.

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

Lifting lugs

The motors are provided as standard with lifting lugs according to the table below. For improved lifting possibilities can variant code 305 be added, please refer to the variant code section for information about availability.

Frame size	Type of lugs	Foot mounted motors	Flange mounted motors
71, 80	No lugs, weight of motors is less than 25 kg	-	-
90-132	Detachable eye bolt	2 pcs on top of motor diagonally placed, size M8	2 pcs on top of motor diagonally placed, size M8
160-200	Integrated in casting / detachable eye bolt	2 pcs on top of motor diagonally placed, integrated in frame casting	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end. 2 pcs eye bolts size M12 delivered with each motor
225-250	Integrated in casting / detachable eye bolt	2 pcs on top of motor diagonally placed, integrated in frame casting	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end. 2 pcs eye bolts size M16 delivered with each motor
280, 315	Detachable eye bolt	1 pcs close to terminal box on top, size M24	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M24 delivered with each motor
355	Detachable eye bolt	1 pcs close to terminal box on top, size M30	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M30 delivered with each motor
400	Detachable eye bolt	1 pcs close to terminal box on top, size M36	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M36 delivered with each motor
450	Detachable eye bolt	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 3 pcs eye bolts size M42 delivered with each motor	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M42 delivered with each motor

Mechanical design

Heating elements

Heating elements are installed on stator winding coil heads to keep the winding dry and free of corrosion in humid conditions. The power of the heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motor size	71	80	90	100	112	132	160	180
Power (W)	25	25	25	25	25	25	25	25

Motor size	200	225	250	280	315	355	400
Power (W)	25	60	60	60	2x60	2x60	2x60

Motors for marine applications mounted on open deck may have heating element powers differing from the ones shown in this table.

Mechanical design

Bearings

ABB's increased safety Ex ec motors are normally fitted with single-row deep-groove grease lubricated ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037.

Axially-locked bearings

All motors with deep groove ball bearings are equipped as standard with an axially locked bearing at the D-end.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before dispatch to prevent damage to bearings during transport. A warning label is attached to motors when transport locking is used.

Locking may also be fitted in other cases if severe transport conditions are expected.

When high axial forces are involved, angular-contact ball bearings should be used. When ordering a motor with an angular-contact ball bearing, specify also the method of mounting and the direction and magnitude of axial force to ensure that optimal bearing system design is chosen. The variant codes for ordering angular-contact ball bearings at D-end are 058 and 060.

Standard and alternative designs

Motor size	Number of poles	Standard design		Alternative design D-end	
		Deep groove ball bearings		Roller bearings (037)	Angular contact ball bearing (058, 060)

Standard design

Alternative design

Bearing life and lubrication

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes up to 315 $\geq 100,000$ hours.

Lubrication

On delivery, motors in frame size 160 and above are pre-lubricated with high-quality grease. Before first start-up, see instructions for re-lubrication and recommended grease in the installation, operation, maintenance and safety manual for low voltage motors for explosive atmospheres delivered together with the motor, or see the lubrication plate on the motor.

Motors with bearings greased for life

Motors in frame sizes 71-132 are equipped with bearings greased for life, while this is available as an option for frame sizes 160-250. Bearings are lubricated with high-quality, high-temperature grease. Bearing types are stated on the rating plate.

The approximate lifetime of bearings in four-pole motors is about 40 0000 duty hours. Lifetime is subject to the load conditions of the application run by the motor.

Lubrication intervals in duty hours for ball bearings

Frame size	Amount of grease g/bearing	Amount of grease g/N-end	Speed 3600 r/min	Speed 3000 r/min	Speed 1800 r/min	Speed 1500 r/min	Speed 1000 r/min	Speed 500-900 r/min

Motors with re-lubrication nipples

In frame sizes 160-400, the bearing system is provided with valve discs to ease lubrication. Motors are lubricated while running. The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1-2 hours after re-greasing. This ensures that the construction is tight and bearings remain dust- and dirt-free.

A grease-collection method can be used optionally.

The following tables show lubrication intervals according to the L_1 principle for various nominal speeds in 25 °C ambient temperature. These values apply to horizontally mounted motors (B3) with 80 °C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Mechanical design

Radial forces

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Where:

D: pulley diameter, mm

P: power requirement, kW

n: motor speed, r/min.

K: belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5

F_R: permissible radial force, refer to tables below.

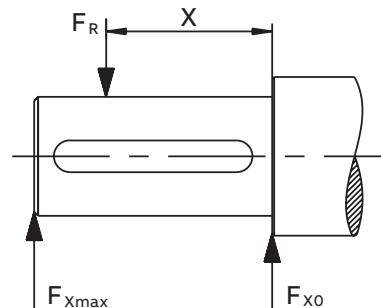

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft together with flame path dimensions affects permissible forces.

If the radial force is applied between points X0 and X_{max}, the permissible force F_R can be calculated with the following formula:

$$F_R = F_{x0} - \frac{X}{E} (F_{x0} - F_{x_{max}})$$

Where:

E: length of the shaft extension in the standard version

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life L_{10h} of 40 000 hours per motor size.

Permissible loads of simultaneous radial and axial forces can be supplied on request.

Mechanical design

Axial forces

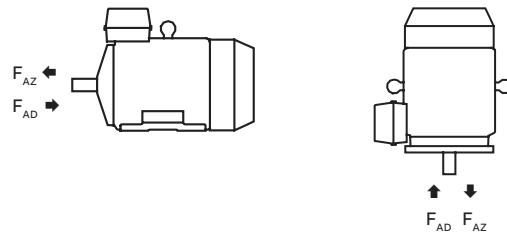

—
01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

01

02

Permissible axial forces

Terminal box

Standard terminal box

Protection and mounting options

The degree of protection for the standard terminal box is IP 55. It complies with the requirements of the protection method 'e' protection level 'c' increased safety and prevents all ignition sources such as sparks, excessive over heating etc. The features of the terminal box are: No self loosening terminals, compliance with creepage and clearance distances as defined in standard for increased safety 'ec' protection.

By default, terminal boxes are mounted on top of the motor at D-end. Side mounted terminal box is possible in frame sizes 160-400. Mounting at N-end is possible for the larger frame sizes. Please refer to the variant code section for more details.

Turnability

The standard terminal boxes for motor sizes 160-315 can be turned 4*90° and in sizes 355-450 2*180° after delivery. For sizes 355-450 is also mounting of terminal box with opening towards D or N-end possible using the relevant variant codes when ordering, this is needed to get the terminal block turned in the right position. For motors in size 71-132 is 4*90° turnable terminal box optional, this can be ordered with variant code 400.

Cable entries

Terminal box is provided as standard with tapped holes for cable glands, no cable glands are included as standard. The entry holes are closed with Ex eb approved blanking plugs made of nickel-plated brass, one of the main entries is closed with a plastic plug as transport and storage protection. Very large motors have an angle adapter between the terminal box and gland plate. Please refer to the table on next page for further information about amount and size of threaded holes, plugs provided as standard.

Different types of cable glands are available as option, suitable for either armoured and non-armoured cables, please refer to the Terminal box alternatives section for more details.

Cable type and terminations

Terminations are suitable for copper and aluminum cables (Al-cables on request for motor sizes 160 to 250). Cables are connected to terminals by cable lugs, which are not included in the delivery.

Earthing bolts

The motors are as standard provided with at least one earthing bolt inside the terminal box and another on the frame. The earthing bolt on the frame is located on top close to the terminal box, motors in size 160-250 is the earthing bolt located on RHS foot (seen from D-end).

Ordering

To ensure the delivery of desired terminations and cable entries for the motor, state the cable type, quantity, size, outer diameter and possibly type of cable glands needed when ordering.

See section Variant codes for all options available.

Standard delivery

Standard delivery if no other information is provided.

Terminal box

Terminal box alternatives

Optional cable termination parts

There is a broad selection of cable termination accessories available to allow a safe and reliable termination of one or several supply cables. The most common options are explained in this chapter.

How to order

- Check first that the terminal box itself allows mounting of the desired cable and cores (refer to table showing standard delivery for each motor size). If very large cable are used might it be necessary to use a larger terminal box and larger terminal board than standard
- Select the right cable gland(s) or cable sealing end unit based on the diameter of the cables(s) and suitability for cable type
- Select appropriate adapter or flange to allow mounting on opening in terminal box
- Note that turning the terminal box might be prevented by use of some adapters.

Optional adapters

To allow easy termination of cables entering the terminal box from above or below, is an angle adapter recommended. These are available for motor sizes 280 and above and can also be used to allow mounting of several cable sealing end units or gland plates. For exact suitability on a certain motor size, refer to the “size of gland plate opening on terminal box” column in section Standard terminal box.column in section Standard terminal box.

Ordering example

Motor and supply cables	110kW, 4-pole, 400V 50Hz, IE2. Cables needed: 1 pcs outer diameter 42 mm steel wire armoured cable, single cross section 120 mm ² . Cables coming from below.
Motor	M3GP 315SMA 4, B3
Adapter (to allow entry of cables coming from below)	Variant code 293 (adaptor D-D)
Cable glands Ex d / Ex e suitable for armoured cables (an M50 gland will suit this cable)	Variant code 734 (specify cable dimensions)
Gland plate drilled and tapped with 1 pcs M50 hole (non-std size)	Variant code 554 (1 pcs M50 x 1.5 threaded hole to be specified)

Adapter						
Variant code	292	293	294	295	296	444
Suited for motor sizes	280	315, 355	315 LKC IE2, 355 SM_2-4 poles, 400 - 450	315 LKC IE2, 355 SM_2-4 poles, 400 - 450	315 LKC IE2, 355 SM_2-4 poles, 400 - 450	315 LKC IE2, 355 SM_2-4 poles, 400 - 450
Opening to terminal box	C	D	E	E	E	E
Flange or opening for end unit	C	D	D	2 x D	3 x D	2 x E
Material	Steel	Steel	Cast iron	Steel	Steel	Steel
Notes	Included in standard delivery for frame size 450, 400 and 355ML and LK 2-4.			Only possible on type 1200 terminal box.		Only possible on type 1200 terminal box.

Cable glands

The motors are delivered as standard with plugged cable entries as described in the previous section. There is a broad selection of different type of cable glands available which are suitable for different types of cable and outer diameter ranges.

Size of threaded opening for cable gland	Cable gland(s) nickel plated brass, Ex e, for non armoured cable, variant code 230 or 731	EMC Cable gland(s) nickel plated brass, Ex e, for non armoured cable, variant code 704	Cable gland Ex d IIC / Ex e for armoured cable with double sealing, variant code 734

*) = High capacity version, delivered as standard with the variant code

Threaded openings for cable glands with NPT thread (variant code 730)

The motors are delivered as standard with openings for cable glands with metric threads as listed in the section describing the standard terminal box. If glands with NPT threads will be used must variant code 730 be ordered. If nothing else is stated on the ordered will the sizes in tables below be delivered.

Motor frame size	Main cable entries	NPT plug
160-180	2 x 1 1/4"	1 x 1 1/4"
200-250	2 x 1 1/2"	1 x 1 1/2"
280	2 x 2"	1 x 2"
315-450	2 x 3"	1 x 3"

Motor frame size	Cable entries for auxiliaries	NPT plug
160-450	2 x 3/4"	2 x 3/4"

Gland plates with threaded openings for cable glands of nonstandard size

If the standard size of threaded openings for cable glands does not suit the gland size and cable that will be used can openings of nonstandard size also be delivered, either by fitting a reducers to make the openings smaller or by increasing the amount or size of holes. The maximum possible size and amount for each gland plate size is listed below. Threaded openings of non-standard size can be ordered using variant codes 554 and 555.

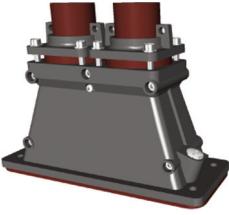

Gland plate size	Maximum amount and size of threaded holes
B	2 x M40
C	2 x M63
D	2 x M90 or 3 x M75
E	2 x M90 or 4 x M75

Gland plates of non-standard material

The standard material used in gland plates is steel. Gland plates made of aluminum or stainless steel are optional, either with cable glands or blind without threaded holes. Please refer to the variant code section for more information.

Cable sealing end units

As an alternative to gland plates and cable glands, cable sealing end units can be used. These allow more space for spreading the cores for easy termination. Cable sealing units have rubber sealed entries for one or two main cables. In addition there are two plugged M20 holes for auxiliary cables. The cable sealing end units are Ex e certified, as option can they be equipped with EMC modules or cable clamping devices by adding variant codes 704 or 231.

	Small	Medium	Large
End unit			
Variant code	277	278	279
Suited for motor sizes	280	315, 355 except 315 LKC IE2, 355 SM_2-4 poles	315, 355 except 315 LKC IE2, 355 SM_2-4 poles
Opening to terminal box	C	D	D
Cable outer diameter	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 48 - 60 mm	1 - 2 cables, 60 - 80 mm
Cable entry for auxiliary cable	2 x M20 plugged holes	2 x M20 plugged holes	2 x M20 plugged holes
Additional optional variants	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)	EMC cable gland (704); Standard gland with clamping device (231)

Auxiliary terminal box

It is possible to equip motors from frame size 160 upwards with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box is made of aluminum, except frame sizes 160-250 where cast iron boxes are used.

Connection terminals are of spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. The auxiliary terminal boxes are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard.

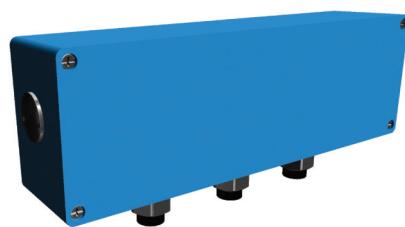

The standard cable entry is 2 x M20 with plugged entries. If cable glands are needed must these be ordered using the variant codes described earlier in this section.

ABB

EU DECLARATION OF CONFORMITY

The Manufacturer: ABB Oy
Motors and Generators
P.O. Box 633
Strömsberg Puistola SA
FIN - 65101 Vaasa, Finland

This declaration of conformity is issued under the sole responsibility of the manufacturer.

The products: 3-phase induction motors of series M3AA, M3DP, M3GP, M3HP, M3JP, M3KC, M3JM, M3KP and M3KC as listed in this document on the pages 2...3 having correspondent name plate markings covered by those as listed.

The motors of the declaration described above are in conformity with the relevant Union harmonization legislation:

Directive 2014/34/EU
The following harmonized standards are applied in relation to which conformity is declared: EN 60079-0/A1:2019*, EN 60079-1:2014*, EN 60079-2-2007, EN 60079-2015*, EN 60079-15:2010, EN 312:2014* and relevant parts of the following standard(s) of standards.

Directive 2014/30/EU (ErP) (29 November 2009)
The motors that are marked as IEC, IED or IEC are in conformity with the requirements set in the Commission Regulation (EU) No. 4/2014 of 5 January 2014 amending Regulation (EC) No. 600/2009. Efficiency classes as defined in the standard EN 60034-30:2009.

Directive 2011/65/EU
Motors are compliant with the Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. Technical documentation based on the standard EN 60580:2012.

The conformity of the end product according to the Directive 2006/42/EC has to be established by the manufacturer of the end product.

Note: Motors have to be installed and maintained according to the relevant standards and instructions of ABB Oy, Motors and Generators. When installed in converter supplied applications, additional requirements must be respected regarding the motor as well as the installation as described in the appropriate dedicated addendum.

Notified Bodies (EN/IEC): L'GIE (0081), Av. Du Général Leclerc, 33, 92266 Fontenay-aux-Roses, France and VTT Expert Services Ltd (0837), Otakaan 7b, 02044 Espoo, Finland

Signed for and on behalf of: ABB Oy, Motors and Generators and ABB Sp.z.o.o

Place and date of issue: Vaasa, Finland, 2017-03-27

TYPE EXAMINATION CERTIFICATE

[1] Equipment or Protective System intended for use in Potentially Explosive Atmospheres Directive 2014/34/EU

[2] Product: M3GP, M3DP, M3BP, M3LP, M3BN Motors Frame Sizes 71 to 450

[3] Manufacturer: ABB Oy, Motors and Generators

[4] Address: Strömsberg Puistola SA, P.O. Box 633, 65101 VAASA Finland

[5] This equipment and any acceptable variation thereof is specified in the schedule to this certificate and the documents therein referred to.

[6] UL International Denko A/S certifies that this product has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of products intended for use in potentially explosive atmospheres given in Annex II of Directive 2014/34/EU of the European Parliament and of the Council, dated 26 February 2014.

[7] The examination and test results are recorded in confidential report no. 504378.11610184

[8] Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN IEC 60079-0:2018 EN 60079-7-2015+A1:2018 EN 60079-31:2014

except for those requirements listed at item 10 of the Schedule.

[9] If the sign "X" is placed after the certificate number, it indicates that the product is subject to the Specific Conditions of Use specified in the schedule to this certificate.

[10] This Type examination certificate relates only to the design of the specified product, and not to specific items of product subsequently manufactured.

[11] The marking of the product shall include the following:

Ex 3 G Ex ec IIC T3...T1 Gc
Ex 3 D Ex tc IIIC T100°C... T150°C Dc

[12] This is to certify that the samples of the Product described herein ("Certified Product") have been examined and found to conform to the requirements of the IEC/EN 60079-0:2018 and IEC/EN 60079-7-2015+A1:2018 and IEC/EN 60079-31:2014. The following table lists the specific test results obtained. The table also lists the applicable IEC/EN 60079-0:2018 and IEC/EN 60079-7-2015+A1:2018 and IEC/EN 60079-31:2014 test results. The manufacturer is solely and fully responsible for confirming that product is fit for its intended purpose and that it complies with all applicable regulations. It is the manufacturer's responsibility to make sure that the test results may be used, in whole or in part, in any other certification process. This is a prior written approval.

for aluminum Increased
safety Ex ec II C T3 Gc
motor in frame size 100.

02 Sample rating plate
for aluminum Increased
safety Ex ec IIB T3 Gc mo-
tor in frame size 70.

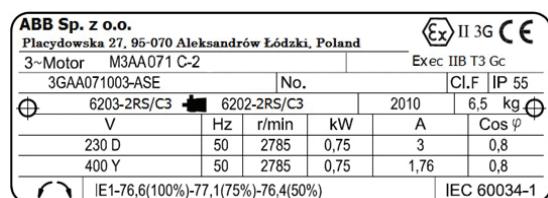

The rating plates are in table form giving values for speed, output, current and power factor at different voltages, there are two rows available for different voltages, usually is the corresponding voltages for star and delta connection stamped. Other voltage and frequency combinations are possible and can be ordered with variant codes 002 or 209.
Please refer to the variant code section.

The following information will be shown on the motor rating plate:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level
- Year of manufacture
- Type of protection
- Apparatus group
- Temperature class
- Identification number for notified body (category 2 motors only)
- Certificate number ATEX and IECEx (if available)

Variant codes

Increased safety aluminum motors Ex ec IIC T3 Gc

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Most of the variant codes apply to IE2, IE3, and IE4 motors. However, confirm the availability of variants for IE3 and IE4 motors with your ABB sales office before making an order.

Mechanical design

Motor frame and drain holes

Motor frame

The motor frame is made of aluminum alloy. Frame size 90-180 have aluminum feet and sizes 200-280 have cast iron feet.

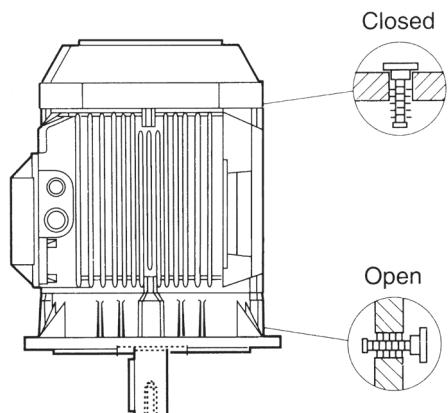

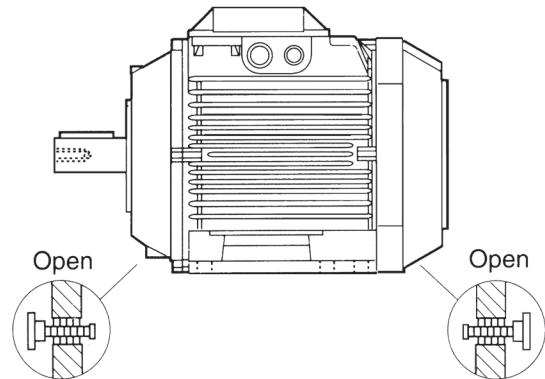

The bearing end shield of sizes 90-132 are made of aluminum, and those of 160 to 280 are made of cast iron.

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Increased safety motors are provided with drain holes fitted with plugs as standard. The plugs are made of plastic material and delivered in open position.

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

Mechanical design

Bearings

ABB's aluminum increased safety motors are as standard fitted with single-row ball bearings according to the table below.

available for sizes 160-250. Motors of size 280 are provided with regreasable bearings as standard.

Standard design: Deep groove ball bearings

Motor size	Number of poles	Foot and flange mounted motor	
		D-end	N-end
90		6205-2RSH/C3	6204-2RSH/C3
100		6306-2RS1/C3	6205-2RSH/C3
112		6306-2RS1/C3	6205-2RSH/C3
132		6208-2RS1/C3	6206-2RS1/C3
160		6309-2Z/C3	6209-2Z/C3
180		6310-2Z/C3	6209-2Z/C3
200		6312-2Z/C3	6210-2Z/C3
225		6313-2Z/C3	6212-2Z/C3
250		6315-2Z/C3	6213-2Z/C3
280	2-pole	6315/C3	6213/C3
280	4-8 pole	6316/C3	6213/C3

Axially-locked bearings

All motors with deep groove ball bearings are equipped as standard with an axially locked bearing at the D-end. For sizes 90-132 is the locking done by a spring washer at N-end pushing the rotor towards D-end.

Bearing seals

Motors in sizes 90-132 are provided with gamma seals at both D and N-end, motors in sizes 160-280 have V-rings at both ends. The sizes 90-132 have in addition to the shaft seals 2RS type bearings with rubber seals for improved protection.

Bearing life and lubrication

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime. The life time is dependent on various factors such as bearing load, motor speed, operating temperature and the purity of the grease. The permissible radial and axial loading for different motor sizes is shown in the tables on following pages.

The tables are valid for 50Hz.

Lubrication

Motors in size 90-250 are delivered with greased for life shielded bearings as standard, as an option are also regreasable bearings with grease nipples

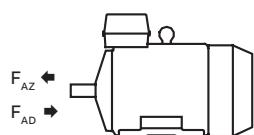

Mechanical design

Axial forces

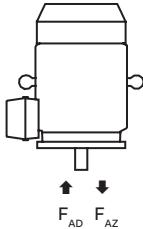

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

Mounting arrangement IM B3

Mounting arrangement IM V1

Permissible axial forces

Motor size	Poles	Mounting arrangement IM B3, deep groove ball bearings				Mounting arrangement IM V1, deep groove ball bearings

¹⁾ The maximum lifetime of the grease is 38 000 h

²⁾ The maximum lifetime of the grease is 27 000 h

³⁾ The maximum lifetime of the grease is 23 000 h

⁴⁾ The maximum lifetime of the grease is 16 000 h

Mechanical design

Radial forces

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Where:

D: pulley diameter, mm

P: power requirement, kW

n: motor speed, r/min.

K: belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5

F_R: permissible radial force, refer to tables below.

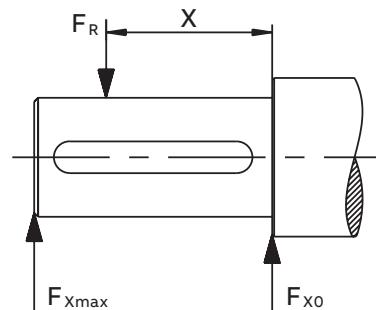

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X₀ and X_{max}, the permissible force F_R can be calculated with the following formula:

$$F_R = F_{x_0} - \frac{X}{E} (F_{x_0} - F_{x_{max}})$$

Where:

E: length of the shaft extension in the standard version

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life L_{10h} of 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft together with flame path dimensions affects permissible forces.

Permissible radial forces

Motor size	Poles	Length of shaft extension E (mm)	Ball bearings Basic design with deep groove ball bearings

Terminal box

Standard terminal box

—
01 Terminal board for motor sizes 90-112.

02 Terminal board for motor sizes 160-280.

03 Terminal board for motor size 132.

Protection and mounting

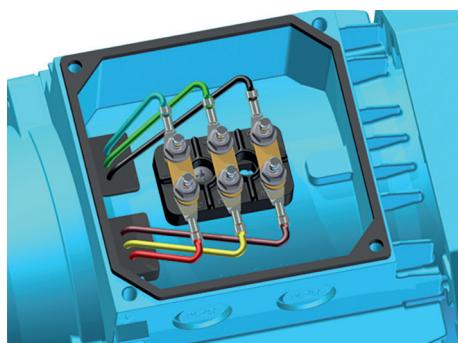

The degree of protection for the standard terminal box is IP 55. It complies with the requirements of the protection method 'Ex ec' increased safety and prevents all ignition sources such as sparks, excessive over heating etc. The features of the terminal box are: No self loosening terminals, compliance with creepage and clearance distances as defined in standard for increased safety protection. By default, terminal boxes are mounted on top of the motor at D-end.

Turnability

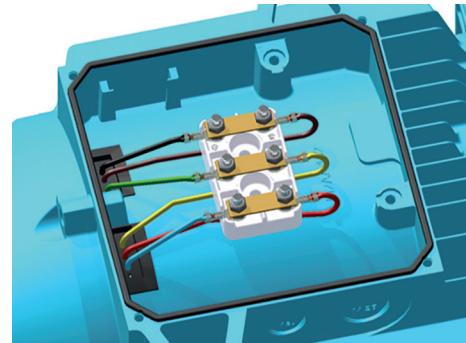

The terminal box of motors in size 90-180 are integrated with the frame which means that the box itself cannot be rotated. There are however cable entries both on RHS and LHS to allow cabling from either side. Motors in size 200-280 have a terminal box made of deep drawn steel mounted on top of the stator, the box itself cannot be rotated but there are two openings with detachable gland plates, one on RHS and another on LHS of the box allowing cable entry from both sides.

Terminal box openings

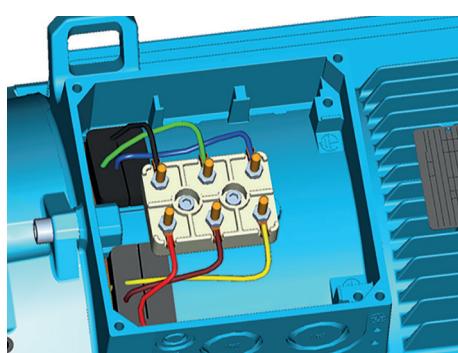

Motor size	Plugged cable entry	Terminal bolt size	Maximum connectable Cu-cable area, mm ²
90-112	2 x (M25 + M20)	6 x M5	6
132	2 x (M25 + M20)	6 x M5	10
160, 180	2 x (2 x M40) + M16	6 x M6	35
200-250	1 x (2 x M40 + M16)	6 x M10	70
280	1 x (2 x M63 + M16)	6 x M10	70

—
01

02

Cable entries

Terminal box is provided as standard with plugged holes for cable glands, no cable glands are included as standard, the knockout entry holes and cable flange holes are closed with Ex e approved blanking plugs. Terminal box is provided as standard with plugged holes for cable glands, no cable glands are included as standard, the knockout entry holes and cable flange holes are closed with Ex e approved blanking plugs.

Cable type and terminations

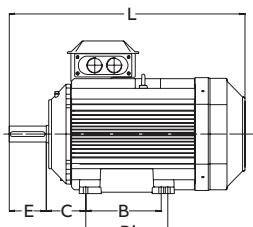

Terminations are suitable for copper cables.
Cables are connected to terminals by cable lugs,
the lugs are not included in the delivery.

Earthing bolts

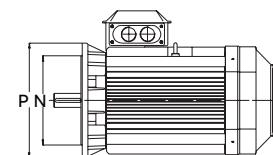

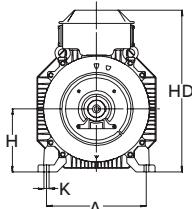

The motors are as standard provided with at least one earthing bolt inside the terminal box and another on the frame. The earthing bolt on the frame is located on top close to the terminal box.

¹⁾ 6315/C3 for 2-pole motors

Total product offering

Motors, generators and mechanical power transmission products with a complete portfolio of services

IEC motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for food and beverage
- Motors for variable speed drives
- Permanent magnet motors
- Synchronous reluctance motors
- Traction motors

NEMA motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for variable speed drives
- Permanent magnet motors
- Servomotors
- Washdown motors

Generators

- Generators for wind turbines
- Generators for diesel and gas engine power plants
- Generators for steam and gas turbine power plants
- Generators for marine applications
- Generators for industrial applications
- Generators for traction applications
- Synchronous condensers for reactive power compensation

Mechanical power transmission components, bearings, gearings

- Mounted bearings
- Enclosed gearing
- Mechanical drive components
- Couplings
- Sheaves and bushings
- Conveyor components
- Geared motor units

Life cycle services

ABB's portfolio of drives

Optimal solution for you

Being able to rely on the continuous high performance and efficiency of your operations is something you want to take for granted. ABB variable-frequency drives are made with all this in mind, established upon more than 40 years of experience and backed by a broad range of life cycle services.

ABB drives help you to optimize your processes and systems with state-of-the-art motor control technology, resulting in increased energy efficiency, better product quality, and reduced operating costs with higher output, less downtime, and reduced need for maintenance. All ABB drives are designed for easy selection, ordering, installation and use, and they offer integrated safety features, giving you more time to focus on what matters for you and your business.

Our portfolio offers low-voltage AC and DC drives, medium-voltage AC drives, and motion control drives spanning the fractional-kilowatt to multi-megawatt power level. There is a drive available for essentially every industry and application and for all types of motors, in environments ranging from water utility facilities to clean electrical rooms, and to harsh coal mines and windy offshore platforms to food and beverage production. This wide product range allows you to select the best-fitting drive solution, providing maximum reliability and efficiency for every need.
